BENFACTORS OF THE McGill University, Montreal.

THE HONORABLE JAMES

McGILL, by his last Will and Testament under date 5th January, 1811, bequeathed the Estate of Burnside, situated near the City of Montreal, and containing forty-seven Acres of Land, with the Manor House and Buildings thereon erected, and also the sum of ten thousand pounds in money, unto "The Royal Institution for the Advancement of Learning," constituted by Act of Parliament in the Forty-First year of the reign of his Majesty, King George the Third, to erect and establish an University or College, for the purpose of Education, for the advancement of learning in the Province of Lower Canada, with a competent number of Professors and Teachers to render such Establishment effectual and beneficial for the purposes intended, requiring that one of the Colleges to be comprised in the said University, should be named and perpetually be known and distinguished by the appellation of "McGill College."

The value of the above mentioned property was estimated at the date of the bequest at £30,000

At a meeting called by a number of the influential citizens of Montreal, and held at the Merchants' Exchange 6th December, 1856, for the purpose of taking into consideration the financial condition of the University of McGill College.—The following Resolution was adopted:

"That an effort ought to be made for increasing the Endowment of McGill College in such a manner as to extend its usefulness, and to place it for the future upon an independent and permanent footing."

Whereupon, in pursuance of the above Resolution, the following donations were enrolled for Special or General objects connected with the University,—the Royal Institution granting Scholarships in perpetuity according to the value of the Donations.

The Honorable John Molson,	} £5,000
Thomas Molson, Esq.,		
William Molson, Esq.,		
for the formation and maintenance of the Chair of English Language & Literature.		

In 1890 the sum of (£20) presented to the College by H. R. H. the Prince of Wales was Applied to the foundation of a Gold Medal to be called the "Prince of Wales Gold Medal." In 1861, the "William Molson Hall" being the west wing of the McGill College Buildings, with the Museum Rooms, and Chemical Laboratory and Class Rooms, was erected through the munificent Donation of the Founder whose name it bears.

In 1861, the "Anne Molson Gold Medal" was founded by Mrs John Molson, of Belmont Hall, Montreal, for an honour course in Mathematics and Physical Science.

In the same year the "Shakespeare Gold Medal" for an honour course, to comprise and include the works of Shakespeare and the Literature of England from his time to the time of Addison, both inclusive, and such other accessory subjects as the Corporation may from time to time appoint,—was founded by Citizens of Montreal, on the occasion of the three hundredth Anniversary of the birth of Shakespeare.

In the same year, the "Logan Gold Medal," for an honour course in Geology and Natural Science, was founded by Sir William Edmund Logan, L. L. D., F. R. S., F. G. S., &c.

In 1865, the "Elizabeth Torrance Gold Medal" was founded by John Torrance, Esq., of St. Antoine Hall, Montreal, in memory of the late Mrs. John Torrance, for the best student in the graduating class in Law, and more especially for the highest proficiency in Roman Law.

In the same year the "Holmes Gold Medal" was founded by the Medical Faculty as a memorial of the late Andrew Holmes Esquire M. D., L. L. D., late Dean of the Faculty of Medicine, to be given to the best Student in the graduating class in Medicine, who shall undergo a special examination in all the branches, whether Primary or Final.

General Announcement.

THE Thirty-fourth Session of this University, being the Fourteenth under the amended charter, will commence in the Autumn of 1866.

By virtue of the Royal Charter granted in 1821 and amended in 1852, the Governors, Principal, and Fellows of McGill College constitute the Corporation of the University, and under the statutes framed by the Board of Governors with approval of the Visitor, have the power of granting degrees in all the Arts and Faculties, in McGill College and in Colleges affiliated thereto.

The Statutes and Regulations of the University have been framed on the most liberal principles, with the view of affording to all classes of persons the greatest possible facilities for the attainment of mental culture and professional training. In its religious character the University is Protestant, but not denominational; and, while all possible attention will be given to the character and conduct of students, no interference with their peculiar religious views will be sanctioned.

I. MCGILL COLLEGE.

THE FACULTY OF ARTS.—The complete course of study in Arts extends over four Sessions, of eight months each; and includes Classics and Mathematics, with English Literature, Logic, Mental and Moral Science, Natural Science, and Modern Languages: all of which subjects are imperative in the three first years of the Course; but in the fourth year options are allowed in favour of the Honour Courses in Classics, Mathematics, Mental and Moral Science, Natural Science, and English Literature. Certain exemptions are also allowed to Professional

Students. There are also Special and Partial Courses, and facilities are afforded for the practice of Meteorological Observations, and for the Study of Hebrew and Oriental Literature. The degrees given are B.A. and M.A.

THE FACULTY OF MEDICINE.—The complete course of study in Medicine extends over four Sessions, of six months each, and leads to the degrees of M. D., C. M.

THE FACULTY OF LAW.—The complete course in Law extends over three Sessions, of six months each, and leads to the degrees of B. C. L. and D. C. L.

[Details of the above courses of study, with the fees and the dates of commencement of the classes, will be found in subsequent pages.]

II. AFFILIATED COLLEGES.

Students of these Colleges are matriculated in the University, and may pursue their course of study wholly in the Affiliated College, or in part therein and in part in McGill College, and may come up for the University Examinations for Degrees on the same terms with the Students of McGill College.

MORRIN COLLEGE, *Quebec, L. C.*,—Is affiliated in so far as regards degrees in Arts and Law. The ordinary Course in Arts includes Classics, Mathematics, English Literature, Mental and Moral Philosophy and Logic. There are Honour Courses in Classics and in Mental and Moral Philosophy.

[Detailed information may be obtained from the Rev. John Cook, D. D., Principal.]

ST. FRANCIS COLLEGE, *Richmond L. C.*,—Is affiliated in so far as regards degrees in Arts.

[Detailed information may be obtained from J. H. Graham, M. A., Principal.]

III. AFFILIATED THEOLOGICAL COLLEGE.

Affiliated Theological Colleges have the right of obtaining for their Students the advantage in whole or in part of the course of study in Arts, with such facilities in regard to exemptions as may be agreed on.

THE CONGREGATIONAL COLLEGE OF BRITISH NORTH AMERICA, *Montreal*, is at present the only affiliated Theological College.

IV. AFFILIATED SCHOOLS.

THE HIGH SCHOOL OF MCGILL COLLEGE affords the Classical and Mathematical training necessary for entering the College course, with a good English education fitting for business pursuits.

THE MCGILL NORMAL SCHOOL provides the training requisite for Teachers of Elementary and Model Schools and Academies. Teachers trained in this School are entitled to Provincial diplomas.

THE MODEL SCHOOLS OF THE MCGILL NORMAL SCHOOL are Elementary Schools, divided into a Boys' Department, Girls' Department and Primary School. Teachers in training in the Normal School are employed in these Schools, under the supervision of the Head Master and Mistress.

[Detailed information respecting these Schools will be found in subsequent pages.]

Dean of the Faculty—VEN. ARCHDEACON LEACH, D.C.L., LL.D.

Librarian—PROFESSOR MARKGRAF.

The next Session of this Faculty will commence on September 17th, 1866, and extend to April 30th, 1867.

The classes of Students recognised under the following regulations are:—(1) *Undergraduates*, matriculated for the whole course of study for the degree of B.A., extending over four years, except in the cases specified in Section first. (2) *Students in Special Courses*, matriculated and studying for the diploma in such special courses. (3) *Partial Students*, matriculated and taking two or more courses of lectures. (4) *Occasional Students*, not matriculated, and taking one course of lectures.

Fee for each Session, for Undergraduates and Special Students, \$20; in addition to which every student is required to pay for the Library, \$2, and for the Gymnasium, \$2.

Fee for Partial and Occasional Students, \$5 for each course of lectures.

Matriculation \$4, required only in the year of entrance.

Fee for Degree of B. A. \$5, to be paid before the examination.

Students in Arts are permitted to board in the City; but arrangements have been made for receiving Students who may desire to reside as boarders in the College, and for placing such Students under the immediate superintendence of Rev. Prof. Cornish, to whom application may be made.

EXTRACTS FROM THE REGULATIONS.

I. MATRICULATION AND ADMISSION.

Candidates for Matriculation as Undergraduates are required to present themselves to the Dean of the Faculty, on the 17th of September, for examination; they may, however, enter after the commencement of the Session, if on examination, found qualified to join the classes.

The subjects of examination for entrance into the First Year are Classics, Mathematics and English.

In Classics.—Latin Grammar, Greek Grammar, and one easy Latin and one easy Greek author. The authors recommended are Caesar: Sallust; Virgil (*Æneid*, B. I.); Xenophon (*Anabasis*, B. I.); Homer (*Iliad* B. I).

In Mathematics.—Arithmetic, Algebra, to Simple Equations inclusive; Euclid's Elements, Books I. II. III.

In English.—Writing from dictation.

Candidates may be admitted to the standing of students of the Second Year, provided that they be found qualified on examination. Such Examination shall include, in addition to the Matriculation Examination, at least so much of the subjects of the First Year as may be necessary for entrance into the classes of the Second Year, and shall be reckoned as a Matriculation Examination.

Students of other Universities desirous of continuing their studies in this Faculty, may be admitted, on the production of certificates, to a like standing in this University, after examination by the Faculty.

Candidates for Matriculation as Students in any Special Course, or for Partial Courses of Study, will be examined in the subjects necessary thereto, as may from time to time be determined by the Faculty.

Persons desirous of entering as Occasional Students, may apply to the Dean for entry in his Register, and may procure from the Secretary tickets for the lectures they desire to attend.

Every Student is expected to present, on his entrance, a written intimation from his parent, or guardian, of the name of the minister of religion, under whose care and instruction it is desired that the

Student shall be placed, and who shall thereupon be invited to place himself in communication with the Faculty on the subject. Failing any intimation from the parent or guardian, the Faculty will endeavour to establish such relations.

§ 2. SCHOLARSHIPS AND BURSARIES,

Sixteen Scholarships have been placed by the Governors at the disposal of His Excellency the Governor General. Application must be addressed to His Excellency, through the Provincial Secretary. Candidates for such Scholarships must pass the usual Matriculation Examination.

By command of His Excellency, four of these Scholarships will be offered for competition in the Matriculation Examination of the ensuing session.

Eight other Scholarships will be granted by the Governors, from time to time, to the most successful Students who may present themselves as candidates. One of these will be given annually to the *Dux* of the High School.

In the event of any Academy or High School in Lower Canada offering for competition in the Faculty of Arts an annual Bursary of not less than \$80, the Governors will add a scholarship thereto.

Any Academy, or High School, sending up in one year three or more candidates competent to pass creditably the Matriculation Examination, will be entitled to a scholarship for the most deserving of such candidates.

One Scholarship in Arts may be given annually to any teacher holding the Model School or Academy Diploma of the McGill Normal School, recommended by the Principal and Professors of the School, and passing creditably the Matriculation Examination in Arts.

All of the above Scholarships shall entitle the Students holding them to exemption from the ordinary Class Fees in the Faculty of Arts.

Two Bursaries, of \$50 each, have been granted by the Board of Agriculture for Lower Canada in aid of Students in the Special course of Agriculture. For terms of competition, see notice of Special Course of Agriculture.

3. COURSE OF STUDY.

FOR THE DEGREE OF B. A.

Undergraduates are arranged according to their standing, as Students of the First, Second, Third and Fourth Years; and, as such must attend all the courses of lectures appointed for their year, and those only, except by special permission of the Faculty.

First Year:—Classics; English Literature; Pure Mathematics; History; Elementary Chemistry.

Second Year:—Classics; French or German; Logic; Pure Mathematics; Botany.

Third Year:—Classics; French or German; Mental and Moral Philosophy and Rhetoric; Mixed Mathematics; Experimental Physics; Zoology.

Fourth Year:—Classics; Mental and Moral Philosophy; Mixed Mathematics; Experimental Physics; Mineralogy and Geology.

Honour Courses.—Courses of study leading to the Honours of the College and University are provided in the following subjects:—
(1) Classics; (2) Mathematics and Physics; (3) Logic and Mental and Moral Philosophy; (4) English Language, Literature and History; (5) Natural Science.

(For details of the Ordinary and Honour Courses of study, see under Sect. 9.)

Undergraduates are required to study either French or German for two years, (viz., in the Second and Third Years,) taking the same language in both years. At the beginning of the Second Year the student must state which language he selects as obligatory. No change can afterwards be made without the special permission of the Faculty. In addition to the obligatory, there are other Lectures, attendance on which is optional, but Students who shall enter on these Courses of Lectures shall be held to the same rules in regard to attendance and conduct as in the case of the obligatory Lectures.

The Lectures in Modern Languages will be so arranged that Students competent and desirous to take in the same year the Lectures in French and in German, may do so.

Students who intend to join any Theological school, on giving written notice to that effect at the beginning of the Second Year, may take Hebrew instead of French or German.

§ 4. EXAMINATIONS.

COLLEGE EXAMINATIONS.

There are two examinations in each year; one at Christmas; and the other at the end of the Session. In both of these, Students will be arranged according to their answering, as 1st Class, 2nd Class, and 3rd Class.

Students who fail in the Christmas Examination may be allowed a Supplemental Examination, on written application to the Faculty stating satisfactory reasons.

Failure in two or more subjects at the Sessional Examination will involve the loss of the Session. The Faculty may permit the Student to recover his standing by passing a Supplemental Examination at the beginning of the ensuing Session. But such permission will not be granted except in cases of sickness, or for other special reasons. For the purposes of this regulation, Classics, and Mathematics with Physics, will each be regarded as two subjects.

The time for the Supplemental Examinations will be fixed by the Faculty; and such Examinations will not be granted at any other time, except by special permission of the Faculty, and on payment of a fee of \$5.

UNIVERSITY EXAMINATIONS.

I. FOR THE DEGREE OF B. A.

There are three University Examinations: that for Matriculation, the Intermediate, at the end of the Second Year, and the Final, at the end of the Fourth Year.

1. The subjects of the Matriculation Examination are stated in Section I.

2. In the Intermediate Examination, the subjects are Classics and Pure Mathematics, with Logic and the English language. The subjects for the Examinations of 1867 are as follows:—

Classics.—Greek.—Polybius.—Book III, Chapp. XX. to LX. inclusive.
Latin.—Livy.—Book XXI.
 Latin Prose Composition.

Mathematics.—Arithmetic.

Euclid, Books I. II. III. IV. VI. and def. of Book V.
 Algebra to Quadratic Equations inclusive.
 Trigonometry, including use of Logarithms

Logic.—Thomson's outlines of the Laws of Thought.

English.—Spalding's History of English Literature.
An English Essay.

3. In the Final Examination the subjects are Classics and Mixed Mathematics, with any two of the following :—(1) Mental and Moral Philosophy, (2) Natural Science, (3) Experimental Physics, (4) One Modern Language and Literature (or Hebrew) with History. The subjects for 1867 are as follows :—

Classics.—Greek.—Aeschines,—Contra Ctesiphontem.
Sophocles.—Philoctetes.

Latin.—Tacitus.—Annals, Book I.
Terence.—Adelphi.
Latin Prose Composition.

General Paper in Grammar and History.

<i>Mathematics</i> —Mechanics	} As treated in Galbraith and Haughton's Manuals.
Hydrostatics	
Optics	
Astronomy	

With any two of the following :—

- 1 *Mental and Moral Philosophy*.—Mansel's Metaphysics,—Part 1.—Psychology ; Schweigler's History of Philosophy ; Whewell's Elements of Morality.
- 2 *Natural Science*.—Geology and Mineralogy, as in Lyell's Elements and Dana's Manual of Mineralogy.—The Zoology, Botany and Chemistry necessary to the study of the books above named : or as in Dallas' Outline of Zoology, Gray's Structural and Systematic Botany and Silliman's First Principles of Chemistry.
- 3 *Experimental Physics*.—Electricity.—Frictional and Voltaic. Magnetism. Acoustics.—Theory of Undulations.—Production and Propagation of Sound.—Vibrations of Rods and Plates.—Vibrations of Fluids.—Musical Sounds. Lardner's Handbooks.
- 4 *History and English Literature*.—Smith's Student's Gibbon.—Smith's Student's Hume.—Marsh's Handbook of the English Language.

Or, instead of History and English, candidates may take any of the following :—

- (a) *History and French*.—History as above. The Course in French for the Fourth Year.—Bossuet.—Discours sur l'Histoire Universelle ; Boileau.—Art Poétique. Translation into French, and French Composition.
- (b) *History and German*.—History as above. Schiller.—Geschichte des 30 jährigen Krieges ; Goethe.—Iphigenie auf Tauris. General paper on Grammar, Translation into German, and German Prose Composition.
- (c) *History and Hebrew*.—(Theological Students only). History as above. Hebrew Grammar ; Translations from first four chapters of Isaiah ; any three of the Psalms. The Chaldee portions of the Scriptures ; Targum of Onkelos on Genesis I. Modern Hebrew Poetry, Halevi or Gabirol.

Candidates for B. A. Honours may omit at the Ordinary Examinations for the Degree, any two of the four subjects appointed, and also the Lectures on such subjects in the Fourth Year, provided that they shall not have been placed lower than Second Class in the Third Year's Examinations in such subjects. For the two subjects thus omitted, the Sessional Examinations at the end of the Third Year will be reckoned as Degree Examinations.

No student shall be entitled to the above privileges, unless his attendance on Lectures and progress in the subject in which he is a Candidate for Honours shall be satisfactory to the Professor, nor unless he shall have obtained a Certificate of creditable answering in the Honour Examinations.

II. FOR THE DEGREE OF M. A.

Bachelors of Arts, of at least three years standing, are entitled to the degree of Master of Arts, after such examination and exercises as may be prescribed by the Corporation. The exercise at present appointed is the preparation of a Thesis on any literary, scientific, or professional subject, to be selected by the candidate, and approved by the Faculty; the Thesis to be submitted to the Faculty and reported on to the Corporation.

§ 5. SPECIAL PROVISIONS FOR PROFESSIONAL STUDENTS.

I. LAW AND MEDICAL STUDENTS.

Students of the Third and Fourth Years, Matriculated in the Faculties of Law or Medicine of this University, are entitled to the following exemptions:—

In the Third Year, they may omit any two of the following subjects: Zoology, Experimental Physics, Rhetoric, and Modern Languages.

In the Fourth Year, they may omit Greek and also Geology or Experimental Physics.

In the ordinary B. A. Examination, they may, in Classics, pass in Latin alone; and, in Mixed Mathematics, in Mechanics and Hydrostatics alone.

To be allowed these privileges in either year, they must give notice at the commencement of the Session, to the Dean of the Faculty, of their intention to claim exemptions as Professional Students, and must produce, at the end of the Session, certificates of attendance on a full course of Professional Lectures in the year for which the exemptions are claimed.

II. THEOLOGICAL STUDENTS.

(Specially applicable to the Congregational College of British North America.)

Such Students, whether entered as Matriculated, or Occasional, shall be subject to the regulations of the Faculty of Arts in the same manner as other students.

The Faculty shall make formal reports to the Governing body of the Theological College, to which any such student may belong, as to:—(1) his conduct and attendance on the classes of the Faculty; and (2) his standing in the several examinations; such reports to be furnished after the Christmas and Sessional Examinations, severally if called for.

Matriculated students shall be allowed no exemptions in the course for the degree of B. A., till they have passed the Intermediate Examination; but they may take Hebrew in the Second and Third Years, instead of Modern Languages.

In the Third and Fourth Years they shall be allowed exemptions from the following subjects:—

In the Third Year they may omit Astronomy and Optics, Experimental Physics and Rhetoric.

In the Fourth Year they may omit Experimental Physics and English Literature.

Certificates of attendance on the full course of lectures in the Theological College must be produced by Students who avail themselves of these exemptions, before entering upon the B. A. Examination.

G. MEDALS, HONOURS, PRIZES AND CLASSING.

1. GOLD MEDALS will be awarded in the B. A. Honour Examinations, to Students taking the highest Honours of the First Rank in the subjects stated below, and who shall have passed creditably the Ordinary Examination for the degree of B. A.

The *Chapman Gold Medal* for the Classical Languages and Literature.

The *Prince of Wales Gold Medal* for Logic and Mental and Moral Philosophy.

The *Anne Melson Gold Medal* for Mathematics and Natural Philosophy.

The *Shakspeare Gold Medal* for the English Language, Literature and History.

The *Logan Gold Medal* for Geology and other Natural Sciences.

In event of none of the candidates for any Medal fulfilling the required conditions, the Medal will be withheld, and the proceeds of its endowment for the year may be devoted to prizes in the subject for which the Medal was intended. (Under this regulation a prize of \$64 will be offered in the Honour Course of the Second Year in Mathematics, to be awarded at the beginning of the Session of 1866-7.)

2. HONOURS, of First or Second Rank, will be awarded to those Matriculated Students who have successfully passed the Examinations in any Honour course established by the Faculty, and have also passed creditably the ordinary Examinations in all the subjects proper to their year.

3. CERTIFICATES of high general standing will be granted to those Matriculated Students who are placed in the First Class in the aggregate of the studies proper to their year.

4. PRIZES, to those Matriculated Students who may have distinguished themselves in the studies of a particular class, and who have attended all the other classes proper to their year.

Students taking B. A. Honours will be placed at the head of the Degree list: and Students who pass the Ordinary Degree and Sessional Examinations will be arranged as 1st Class, 2nd Class or 3rd Class, according to their answering.

The names of those who have taken Honours, Certificates, or Prizes, will be published in the order of merit; and with mention, in the case of students of the First and Second Years, of the Schools in which their preliminary education has been received.

7. ATTENDANCE AND CONDUCT.

All Students shall be subject to the following regulations for attendance and conduct:—

1. A Class-book shall be kept by each Professor and Lecturer, in which the presence or absence of Students shall be carefully noted; and the said Class-book shall be submitted to the Faculty at all their ordinary Meetings during the Session.

2. Professors shall note the attendance immediately on the commencement of their Lectures, and shall omit the names of Students entering thereafter, unless satisfactory reasons are assigned. Absence or tardiness, without sufficient excuse, or inattention or disorder in the Class-room, if persisted in after admonition by the Professor, shall be reported to the Dean of Faculty, who may reprimand the student, or refer to the Faculty, as he may think proper.

3. The number of times of absence, from necessity or duty, that shall disqualify for the keeping of a Session, shall in each case be determined by the Faculty.

4. While in the College, or going to or from it, Students are expected to conduct themselves in the same orderly manner as in the Class-rooms. Any Professor observing improper conduct in the College building or grounds, may admonish the Student, and if necessary report him to the Dean.

5. Every Student is required to attend regularly the religious services of the denomination to which he belongs, and to maintain without, as well as within the walls of the College, a good moral character.

6. When Students are brought before the Faculty under the above rules, the Faculty may reprimand, report to parents or guardians, disqualify from competing for prizes and honours, suspend from Classes, or report to the Corporation for expulsion.

7. Any Student injuring the furniture or building will be required to repair the same at his own expense, and will in addition be subject to such other penalty as the Faculty may see fit to inflict.

8. All cases of discipline involving the interests of more than one Faculty, or of the University in general, shall be immediately reported to the Principal, or, in his absence, to the Vice-Principal.

§ 8. LIBRARY AND MUSEUM.

1. Students may receive books from the Library, on depositing the sum of four dollars with the Librarian, and signing a receipt for the books received : such deposit to be returned to the Student on his returning the book uninjured. Books of reference and works containing valuable illustrations, may not be removed from the Library.

2. Students may receive only two volumes at one time, and must return them within two weeks, on penalty of a fine of one shilling for each additional week.

3. Any volume or volumes lost or damaged by a Student, shall be paid for by him at such rates as the Faculty may direct, having reference to the value of the book and of the set to which it may belong.

4. Students may consult books in the Library at such hours as may be determined by the Faculty.

5. Professors and Lecturers may receive from the Librarian any books required by them for their duties in the College, not exceeding ten volumes at any one time. Books so borrowed must be returned at or before the close of each Session.

6. Persons not connected with the College may consult books in the Library, on obtaining an order to that effect from any of the Governors, or from the Principal, the Dean of Faculty or any of the Professors ; and Donors of books or money to the amount of Fifty Dollars, may at any time consult books, on application to the Librarian.

7. The times and conditions of study in the Museum will be arranged by the Professor of Natural History.

Second and Third Years.—The exercises of the Elementary Course will consist of recitations, reading and analysis, translations, oral and written, and writing from Dictation. Special regard will be had to the affinities of the German with the English. Text-books:—Schmidt's German Guide (1st—3rd Course); Schmidt's Reading Book, and Adler's progressive German Reader.

In the *Advanced Course* the theory of German Grammar will receive greater expansion, and the Exercises will comprise select readings in German prose and poetry, composition in the various styles of writing, and translations from English writers.

The Text-book for this course will be made known at the commencement of the Session.

During the *Advanced Course* a Series of Lectures will be delivered on the History of German Literature, from the earliest periods down to the classical age of Goethe and Schiller;—closing with a brief notice of the state of German Literature in the present day.

Fourth Year.—An additional Course of German Literature, for Students desiring a more complete knowledge of the Language.

HEBREW AND ORIENTAL LITERATURE.

Professor, REV. A. DE SOLA, LL.D.

Elementary Course.—(For Students of the First and Second Years)—Grammar:—The Text-book employed will be Gesenius' Hebrew Grammar, with exercises in Orthography and Etymology.

Reading:—Translation and Grammatical Analysis of Historical Portions of the Scriptures—Syntax—Mishlé Chualim—Fables, &c.

Advanced Course.—(For Students of the Second, Third and Fourth Years.)—Introduction to the Study of Hebrew Poetry—its spirit and characteristics Lowth and Sarchi as Text Books. Translations from the Psalms, Lamentations and Isaiah. Ancient compared with Modern Hebrew Poetry; the productions of Halevi Gabirol, &c. Grammar, Exercises &c., continued.—*The Chaldee Language.* Grammar Mebo Halashon Aramith of J. Jeitteles. The Chaldee portions of Scripture. Targum of Onkelos and P. Yerushalmi, *The Syriac Language*, Grammar, (Uhlemann's) and Translations.

The course will comprise lectures on the History of the Hebrew Language and Literature in particular, with a general notice of the other Oriental Languages, their genius and peculiarities. Comparative Philology, affinity of roots, &c., will also receive due attention, while the portions selected for translation will be illustrated and explained by reference to Oriental manners, customs, history, &c.

SPANISH LANGUAGE AND LITERATURE.

REV. PROFESSOR DE SOLA.

(Extra Fee for this Class, \$5.00. Spanish may be taken by Students instead of French or German).

The study of the Spanish Language on this Continent, being generally pursued with special reference to commercial purposes, it will be sought to impart in this Course a practical knowledge of the Castilian, the richest and most harmonious of the Peninsular languages—as well as an acquaintance with its Literature.

Ollendorff's Spanish Grammar by Valazquez and Simonné, and the Reader of M. Valazquez are the Text-books employed in the Junior Class, who will also be exercised in composition by both written and oral exercises. In the Senior Class, Fernandes' Exercises, continuation of Grammar and Composition, Cervantes' Don Quixote, Quintana Vida del Cid, and Marianas Historia will be the subjects of study. Besides a special comparison with the Portuguese Language, a general notice, literary and historical, of the Basque and other dialects will be given.

MATHEMATICS AND NATURAL PHILOSOPHY.

Professor, ALEXANDER JOHNSON, LL.D.

MATHEMATICS. (First Year.)—Arithmetic.—Euclid, Books 1, 2, 3, 4, 6, with Definition of Book 5 (omitting propositions 27, 28, 29, of Book 6). Galbraith and Haughton's Edition.—Colenso's Algebra, part 1 to end of Quadratic Equations.—Galbraith and Haughton's Plane Trigonometry to end of Solution of Plane Triangles.—Nature and use of Logarithms.

MATHEMATICS. (Second Year.)—Arithmetic, Euclid, Algebra and Trigonometry as before.—Remainder of Galbraith and Haughton's Plane Trigonometry.—Conic Sections treated Geometrically. (The Parabola as in Drew's Conic Sections, the definitions of the Ellipse and Hyperbola, with the fundamental properties of their tangents.) Euclid, Book XI, Props. 1 to 21; Book XII, Props. 1, 2.

The Course for the Intermediate University Examination consists of the Mathematics for the first two years, except Conic Sections and Solid Geometry.

MATHEMATICAL PHYSICS AND ASTRONOMY. (Third Year.)—Galbraith and Haughton's Mechanics, (omitting chap. 5 of Statics), Hydrostatics, Optics and Astronomy.

At the Ordinary Examinations, answers to questions in Mechanics on the Chapters on Friction, Collision of Bodies, and Projectiles, will be taken into account only in determining the relative positions of those whose other answers shall entitle them to be placed in the First Class.

EXPERIMENTAL PHYSICS. (Third and Fourth Year.)—1. *Light*—Theories—Reflection.—Refraction.—Dispersion.—Interference and Diffraction.—Double Refraction.—Polarization. 2. *Heat*—Dilatation of Solids, Liquids and Gases.—Specific and Latent Heat.—Radiation and Conduction of Heat. 3. *Electricity*—Frictional and Voltaic. 4. *Magnetism*. 5. *Acoustics*—Theory of Undulations.—Production and Propagation of Sound.—Vibrations of Rods and Plates.—Vibrations of Fluids.—Musical Sounds. Text-Books—Lardner's Hand-books and Tyndall on Heat. This Course extends over two years.

The Lectures in Mathematical and Experimental Physics will be illustrated by Apparatus.

Honour Courses.

MATHEMATICS. (First Year.)—Mulcahy's Modern Geometry, first five chapters.—Townsend's Modern Geometry.—Wood's Algebra.

MATHEMATICS. (Second Year.)—Young's or Todhunter's Theory of Equations.—Hind's Plane and Spherical Trigonometry.—Salmon's Analytic Geometry, first thirteen chapters.—Hall's Calculus, Chapters 1, 2, 3, 4, 6, 7, of Diff. Cal., Chapters 1, 3, 4, 5, of Integ. Cal.

MATHEMATICAL PHYSICS.—(*Third Year.*)—Todhunter's Statics, (omitting Chap. 13.)—Sandeman's Dynamics of a Particle.—Besant's Hydrostatics, Chaps. 1, 2, 3, 5.—Walton's Mechanical Problems.—Griffin's or Parkinson's Optics.—Hymer's Astronomy, (selected course.)

Course for the Anne Molson Prize.

Hall's Differential and Integral Calculus.—Salmon's Conic Sections. The value of the prize is about \$64. Candidates must have completed their Second Year of study. An examination for it will be held in the beginning of the Session of 1866-7.

B. A. Honour Course.

PURE MATHEMATICS.—Hind's Plane and Spherical Trigonometry.—Young's or Todhunter's Theory of Equations.—Hall's Differential and Integral Calculus.—Boole's Differential Equations, (selected course.)—Gregory's Examples of the Calculus, (omitting the last 2 chapters.)—Salmon's Conic Sections.—Salmon's Geometry of three Dimensions, (selected course.)

MECHANICS.—Todhunter's Statics.—Sandeman's Dynamics of a Particle.—Griffin's Dynamics of a Rigid Body.—Besant's Hydrostatics and Hydro-dynamics.—Walton's Mechanical Examples.—Walton's Examples in Hydrostatics.

ASTRONOMY.—Hymer's Astronomy.—Sir John Herschel's Outlines of Astronomy, (Part II. on the Lunar and Planetary Perturbations.)—Godfray's Lunar Theory.

Newton's Principia, Lib. I, Sects. 1, 2, 3, 9, and 11.

LIGHT.—Lloyd's Wave Theory of Light.

HEAT.—Lardner's Hand-book. Tyndall's "Heat considered as a mode of motion."

ELECTRICITY. }
MAGNETISM. } Lardner's Hand-book.

The examination for B. A. Honours will continue for *four* days, during six hours each day.

The examinations for Honours in the other years will continue for *two* days.

Engineering Students may be candidates for Honours.

At every examination (whether Ordinary or Honour) in the first two years Students are liable to examination in all the subjects of the previous course: and in the last two years, in all the subjects of the third and fourth years.

NATURAL HISTORY.

Professor, J. W. DAWSON, LL.D., F.R.S., F.G.S.

I. BOTANY.—(Second Year and part of the Third Year.)

1. *Histology and Morphology of the Plant*, or description of its elementary tissues and organs.

2. *Physiology of the Plant*, or investigation of its functions of Nutrition and Reproduction.

3. *Systematic and Descriptive Botany*, or the principles of the Classification of Plants, with descriptions of the more important Natural Orders, special notices of the Flora of Canada, and instructions for collecting and determining Plants, and for the use of the Microscope.

4. *Geographical Botany*, or the distribution of Plants over the Globe

Text-book—Gray's Structural and Systematic Botany.

Students desiring a more complete knowledge of the subject, or who have collected Plants in the summer vacation, will have the benefit of an additional Course of determinative and Canadian Botany in the two first months of their third Session. Prizes will be given in this course for the best collections of Plants, and the greatest proficiency in their determination. The prize collections or duplicates of them to remain in the College Museum.

II. ZOOLOGY AND COMPARATIVE PHYSIOLOGY, (Third Year.)

1. *General Zoology*, including the elements of the Histology, Comparative Anatomy and Physiology of Animals, with the Principles of Classification, and the division of the animal Kingdom into Provinces or Sub-Kingdoms.

2. *Descriptive Zoology*, including the characters of the classes and orders of the Animal Kingdom, illustrated by typical examples, and as far as possible by Canadian species.

Text-books—Synopsis by the Professor, with Agassiz and Gould's Principles.

III. MINERALOGY AND GEOLOGY, (Fourth Year.)

1. *Mineralogy*.—Chemical and Physical characters of Minerals, including Crystallography, the methods of determining species, and Descriptive Mineralogy; with special reference to those species most important to Geology, or useful in the Arts.

2. *Physical Geology*.—Composition of Rocks and their structure on the small scale.—Origin of Rocks, considered as aqueous, igneous, or metamorphic. Arrangement of Rocks on the large scale; stratification, elevation and disturbances, denudation.

3. *Chronological Geology and Palaeontology*.—Data for determining the relative ages of formations. Classification according to age. Fauna and Flora of the successive periods. Geology of British America

4. *Practical and Economical Geology*.—Methods of observation and of making Geological surveys. Applications of the science to Mining, Engineering, and Agriculture.

Text-Books—Dana's Manual of Mineralogy and Lyell's Elements of Geology.

AGRICULTURAL CHEMISTRY.

PROFESSOR DAWSON.

A course of Lectures on this subject is delivered at the Normal School, and additional Lectures and instructions are given to students in the special course of Agriculture.

SPECIAL COURSE OF AGRICULTURE.

Matriculation.

Students entering on this course must pass the Matriculation examination in Arithmetic, and writing English from dictation. Occasional Students may enter on satisfying the Professor that they are competent to proceed with the work of the class.

Course of Study, &c.

First Year.—Elements of Agriculture as in Dawson's First Lessons.

<i>Chemistry,</i>	}	As in the First and Second years of the College course.
<i>Vegetable Physiology & Botany,</i>		
<i>English,</i>		
<i>French,</i>		

Second Year.—Advanced Agriculture, as in Johnson's Scientific Agriculture, and in suitable text-books in practical Agriculture.

<i>Experimental Physics,</i>	}	As in the Second and Third years of the College course.
<i>Animal Physiology & Zoology.</i>		
<i>English,</i>		
<i>French,</i>		

Fee for the Course, \$20 per Session, or for Agriculture alone, \$5. Matriculation, \$4. Library and Gymnasium, \$4.

On passing the examination, Students will be entitled to certificates.

Bursaries, &c.

Two Bursaries of \$50 each, provided by the Board of Agriculture for Lower Canada, (and for the present session exemption from the sessional fee of \$20) will be granted on the following conditions:—

Candidates must not be less than 16 years of age; must produce certificates of good character, and must pass creditably the Matriculation Examination in Arithmetic and English. They must also declare their intention to apply the education received to the prosecution of practical Agriculture.

Should more than two candidates apply, the Bursaries will be given to those who shall pass the best Matriculation Examinations.

Free scholarships exempting from the Sessional Fees, will be given to students who, in addition to the course stated above, shall pass the Matriculation Examination in Mathematics, and pursue creditably the College course therein for one or two sessions.

Mr. Price, student ..	Prepared specimen of a Frog from Dominica.

The *Library of the Faculty of Arts* contains about 5,000 volumes of standard works, selected with especial reference to the wants of Professors and Students, and open to their use during the Session.

The *Apparatus* includes Electrical and Pneumatic Instruments of the largest size and most modern construction, several Microscopes, a Telescope, and instruments illustrative of Statics, Dynamics, Hydrostatics, Heat, Optics, Astronomy and Geodesy. The Laboratory is fitted up with the apparatus necessary for the pursuit of practical researches in Chemistry. The Observatory is in constant use for Magnetical and Meteorological observations.

The *Museum* consists of:

1. The general collection in Zoology, including specimens illustrative of the leading types in all the classes of Animals.
2. The general collection in Geology and Palæontology, including specimens illustrative of all the Geological periods.
3. The Holmes collection of 2,000 Canadian and Foreign Minerals.
4. The Holmes Herbarium, containing specimens of nearly all the plants indigenous to Lower Canada, and a large collection of exotic plants.
5. The Logan collection of 475 characteristic Canadian Fossils and Rocks.
6. The Couper collection of 2,400 Canadian Insects.
7. The Carpenter collection of Mazatlan Shells.

All these collections are used to illustrate the lectures, or are open to the inspection of Students.

Dean of the Faculty, — G. W. CAMPBELL, A.M., M.D.

The thirty-fourth Session of the Medical Faculty of the McGill University, will be opened on Monday, 5th November, 1866; and will be continued during the six months following.

To meet the circumstances of General Practitioners in British North America, where there is no division of the profession into Physicians and Surgeons exclusively, the degree awarded upon graduation is that of "Doctor of Medicine and Master in Surgery." This designation is also appropriate, from agreeing with the general nature and equable character of the previous curriculum demanded of the candidates for this double rank, as is fully specified hereafter. The degree is received by the College of Physicians and Surgeons of Lower Canada, and upon ownership being proved, admits the holder to become a Licentiate of that body, and to practice Physic, Surgery, and Midwifery.

To intending students desirous of information upon the best manner of pursuing their studies, the following suggestions are made by the Faculty:—

(1.) Exclusively of general education, professional reading for some time previously to matriculation is advised as a preparation, whereby familiarity with technical terms will be gained, and an insight obtained into the subjects to be brought under notice during lectures.

(2.) Though three years constitute the shortest time required for College attendance, yet the Student is at liberty to extend this as much further as he pleases; the addition of a year, or even two, is considered to be a great benefit, for it obviates the crowding of branches within too brief a term, and permits of a more extensive attainment of the topics they embrace.

(3.) Attention is recommended to be given during the first Session to the primary branches entirely: during the second Session an increase is proper, and two of the final courses may be profitably conjoined with such of the antecedent as are required; while during the remaining period further advance is to be made by completing the curriculum required of the candidate for graduation. Clinical courses should not be taken out during the first Session.

Matriculation is necessary every Session; it is required upon entrance or as nearly afterwards as possible, and always before any class tickets are procured. The Register is closed annually in the month of December. Class tickets are payable in advance, and if not taken out within the prescribed period of the current session, will not be granted after its expiration.

The ample and varied means which are placed at the disposal of the student by this school in its spacious accommodations and abundant provisions, together with the large hospitals in connection with it, are briefly referred to in the following pages.

Courses of Lectures.

The number of Professors in the Faculty is nine; the number of Classes, ten; two of the classes (often conjoined in European Schools) being held by one Professor.

1. **ANATOMY.**—(Prof. Scott)—The fresh subject is chiefly employed in the illustrations of the Lectures in this branch, aided however, by dried preparations, wax models, plates full size of life, &c.

The Dissecting Room is under the direction of the Professor, aided by the Demonstrator of Anatomy. It is open from 8 a.m. to 10 p.m., being lighted with gas. All the usual conveniences are supplied, and the Demonstrator will be in attendance to assist the pupils in their operations.

2. **CHEMISTRY.**—(Prof. Sutherland)—Inorganic Chemistry is fully treated; and a large portion of the course is devoted to Organic Chemistry and its relation to Physiology. The branches of Physics bearing upon or connected with Chemistry, also engage the attention of the class. For experimental illustration, abundant apparatus is possessed by the Professor, among which

may be enumerated, a powerful Air Pump—Oxy-Hydrogen Microscope—Polariscope—extensive series of Crystallographic models—Electrical and Galvanic apparatus, &c., &c.

3. MATERIA MEDICA.—(Prof. Wright)—This course is illustrated from a Cabinet of Pharmacological objects : by plates of Medicinal Plants, (Wagner, Roques, Stephenson and Churchill)—by dried specimens ; by carefully prepared Microscopical objects, &c., &c. Analytical experiments with the ordinary re-agents are also shown ; and diagrams, with other illustrations, are used.

4. INSTITUTES OF MEDICINE.—(Prof. Fraser)—Under which are comprised *Histology, Physiology, General Pathology and General Therapeutics*. The minute Structure and Composition of the various Organs, and the Fluids and Tissues of the body in health and disease are explained and illustrated by Microscopic Preparations, Plates and Preparations from the Museum.

5. PRACTICE OF MEDICINE.—(Prof. Howard)—The extensive series of plates contained in the Library, Libart, Cruveilhier, Garswell, Hope, Alibert, Willis, Bateman, &c., &c., will be employed ; also Morbid Preparations and models of diseased parts.

5. SURGERY.—(Prof. Campbell)—Divided into Principles and Practice, including Surgical Anatomy and Operative Surgery, exhibited on the subject. —Quain's large plates, MacLise, Dalrymple, &c. The various surgical instruments and apparatus exhibited, and their uses and application explained and practically illustrated.

7. MIDWIFERY.—(Prof. Hall)—Including diseases of females and infants, illustrated by a series of Drawings on a large scale ; by humid Preparations ; by models in wax ; and by the use of the artificial Pelvis.

8. MEDICAL JURISPRUDENCE.—(Prof. McCallum)—Includes Toxicology—the modes of testing for poisons are exhibited, and post-mortem appearances illustrated by plates—Insanity, Public Hygiene, and Medical Police are touched upon.

9. CLINICAL MEDICINE.—(Prof. McCallum)—Taught by lectures and at the bed side—Physical Diagnosis taught practically, and each pupil invited to take part in it.—Examination of the urine, chemically and microscopically explained and illustrated.

10. CLINICAL SURGERY.—(Prof. Craik)—Taught in similar manner. For both these Classes ample material is afforded by the cases at the Montreal General Hospital.

11. BOTANY AND ZOOLOGY.—(Prof. Dawson)—In addition to the above classes, Students are required to attend one course of Botany and one course of Zoology, on which subjects separate courses of Lectures are delivered to Medical Students. For details see announcement of the Faculty of Arts.

Library and Museum.

The Library contains upwards of 3,500 volumes, including the most useful books for reference, as well as the most elementary ones ; the works of the older authors as well the most recent. It is open to the Student without charge, under necessary regulations for the care of the books. The Museum contains a large number of preparations, chiefly pathological ; also, wax and papier mache models.

Hospitals.

The Montreal General Hospital is visited every day by the Medical officers in attendance. After the visit, a large number of out-door patients are examined and prescribed for. The Fee for a six months' ticket is Six Dollars; for perpetual, Sixteen Dollars.

The Operating Room (used also for a lecture room) is so constructed as to suit the convenience of the Students in obtaining a good view of the operations going on.

The University Lying-in-Hospital is under the direction of the Professor of Midwifery. Students who have already attended one course of his lectures, are furnished with cases in rotation. The Fee for a six months' ticket is Five Dollars.

Past Session.

The total number of Students in the past Session was 178, as follows:—From Canada East, 93; Canada West, 72; New Brunswick, 3; Prince Edward Island, 2; Nova Scotia, 3; Newfoundland, 1; United States, 4.

The names of the students who passed the Examination in Natural History are as follows:—

Botany.

Class 1st.—O. H. E. Clark, A. A. Henderson, G. F. Bull, W. H. Howitt, F. J. Tuck, W. Cherry, and A. E. Spohn.

Class 2nd.—A. Renfret, F. A. L. M'Nab, T. J. Alloway, W. M'Farlane, W. P. Buckle, J. Campbell, T. Wilson, J. Pridham, C. J. Renfret, R. A. D. King, and J. M'Fie.

Class 3rd.—A. Harkness, F. Hall, T. Archer, J. A. Whyte, A. Garneau, A. Gellatly, D. D. M'Bain, C. Dansereau, J. H. Wye, T. de Grosbois, D. Fraser, J. Stinson, J. Stewart, A. L. Wilson, W. Cruise, R. Spencer, A. Tanguay, and A. V. Clement.

Zoology.

Class 2nd.—T. A. Rodger.

The number of Students who passed the Primary Examination, which includes Anatomy, Chemistry, Materia Medica, Institutes of Medicine, and Botany or Zoology, was 39, as follows :—

Mr. JOHN R. SMALLWOOD, Montreal,	Mr. HENRY W. MCGOWAN, Kingsey,
" EMERY ALLARD, Belœil, C.E.,	" C.E.

Faculty of Law.

The Principal, (ex-officio.)

Professors—BADGLEY.

ABBOTT.

TORRANCE.

LAFRENAYE.

LAFLAMME.

CARTER.

Dean of the Faculty,—HON. J. J. C. ABBOTT, Q.C., B.C.L.

The several courses of Lectures in the Faculty of Law, comprise every branch of Legal Study.

The Educational Officers of this Faculty have felt that the Law of Lower Canada, though in many of its details purely local, retains, as its leading characteristics, the noble and imposing features of the civil law, and that the principles established in the Roman jurisprudence, still form the groundwork of many of its departments. The Lectures, therefore, though prepared with especial reference to the Law of Lower Canada, have been as far as consistent with their primary object, divested of any purely sectional character, and are made to inculcate such comprehensive principles, as form, to a great extent, the basis of every system of jurisprudence.

It is considered that this system will afford to students of the Law of Lower Canada, a better foundation for their subsequent studies, and tend to give them a more extended and comprehensive grasp of legal subjects, than a course of instruction conducted solely with reference to local law, while it is hoped, in view of the increased importance which the study of civil law is everywhere assuming, that the advantages offered, and the mode of education adopted by this Faculty, will open to it an extensive field of usefulness.

The complete course of study in this Faculty extends over three years; but may be shortened to two years, when the student matriculates in the third year of his indentures.

The following are the subjects comprised in the complete course of three years :—

Extracts from the Regulations.

1. Any person desirous of becoming a Matriculated Student shall apply to the Dean of the Faculty for examination, and for entry in the Register of Matriculations, and shall procure tickets of Matriculation and of admission to the Lectures for each Session of the Course.

2. Candidates for Matriculation shall be examined in at least one Latin Classic and in English or French, the standard being such as may be determined by regulation of the Faculty, approved by the Corporation.

3. Students in Law shall be known as of the First, Second, and Third Years, and shall be so graded by the Faculty. In each year Students shall take the studies fixed for that year, and those only, unless by special permission of the Faculty.

4. The register of Matriculation shall be closed within two months after the commencement of the Session, and return thereof shall be immediately made by the Dean to the Registrar of the University. Candidates applying thereafter may be admitted on a special examination to be determined by the Faculty; and if admitted, their names shall be returned in a supplementary list to the Registrar.

5. Persons desirous of entering as Occasional Students shall apply to the Dean of the Faculty for admission as such Students, and shall obtain a ticket, or tickets, for the classes they desire to attend.

6. Students who have attended Collegiate courses of study in other Universities for a number of terms or sessions, may be admitted, on the production of certificates, to a like standing in this University, after examination by the Faculty.

7. All Students shall be subject to the following regulations for attendance and conduct—

(1) A Class book shall be kept by each Professor and Lecturer, in which the presence or absence of Students shall be carefully noted; and the said Class-books shall be submitted to the Faculty at all the ordinary meetings during the Session.

(2) Punctual attendance at all the classes proper to his year is required of each Student. Professors will note the attendance immediately on the commencement of their lectures, and will omit the names of students entering thereafter, unless satisfactory reasons are assigned. Absence or tardiness, without sufficient excuse, or inattention or disorder in the Class-room, if persisted in after admonition by the Professor, will be reported to the Dean of the Faculty, who may reprimand the student, or report to the Faculty, as he may decide. While in the College building, or going to or from it, students are expected to conduct themselves in the same orderly manner as in the Class-rooms. Any Professor observing improper conduct in the Class-rooms, or elsewhere in the building, will admonish the student, and if necessary, report him to the Dean.

(3) When students are reported to the Faculty under the above rules, the Faculty may reprimand, report to parents or guardians, disqualify from competing for prizes or honours, suspend from classes, or report to the Corporation for expulsion.

(4) Any Student injuring the furniture or building will be required to repair the same at his own expense, and will, in addition, be subject to such penalty as the Faculty may see fit to inflict.

(5) The number of times of absence, from necessity or duty, that shall disqualify for the keeping of a Session, shall, in each case, be determined by the Faculty.

(6) All cases of discipline involving the interests of more than one Faculty, or of the University generally, shall be reported to the Principal, or, in his absence, to the Vice-Principal.

8. At the end of every Session there shall be a general examination of all the Classes, under the superintendence of the Professors, and of such other Examiners as may be appointed by the Corporation, which examination shall be conducted, as far as possible, by means of written or printed questions, answered by the students in writing, in the presence of the Examiners. The results shall be reported as early as possible to the Faculty, which shall decide the standing of the Students accordingly.

9. Each Professor shall deliver one Lecture in each week to the Students of each year, and each Lecture shall be of one hour's duration; but the Professors and Lecturers shall have the right from time to time to substitute an examination for any of such Lectures.

10. No Student shall be considered as having kept a Session in this Faculty, unless he shall have regularly attended at least three Courses of Lectures, one of which courses shall be on the Civil Law; nor unless at the end of such Session he shall have passed the Sessional examinations to the satisfaction of the Faculty.

11. The Faculty shall have the power, upon special and sufficient cause shown, to grant a dispensation to any Student from attendance on any particular Course or Courses of Lectures, but no distinction shall, in consequence, be made between the examinations of such Students and those of the Students regularly attending Lectures.

12. The final Examination for the Degree of B.C.L. shall be conducted in the same manner as in ordinary Sessional Examinations, but the Preparation of a Thesis, either in Latin, French, or English, upon some subject previously approved by the Dean of the Faculty, shall form an essential part of every such final Examination.

13. The Elizabeth Torrance Gold Medal in the Faculty of Law shall be awarded to the Student who, being of the Graduating Class, and having passed the final Examinations, shall have prepared a Thesis of sufficient merit in the estimation of the Faculty to entitle him to compete, and who shall take the highest marks in a special examination for the medal, which examination shall, in all cases, include the subject of Roman Law.

14. The exercises required, under the 3rd Art. of the 7th Chapter of the Statutes of this University, to entitle the Student to receive the Degree of B.C.L. in this Faculty, shall consist of attendance upon Lectures and submission to Examinations as hereinbefore prescribed; and no distinction in respect thereof shall be made between Students applying for their Degrees, whether their attendance upon Lectures shall have been for two or three years.

15. The fees exigible in this Faculty shall be as follows:—

Matriculation Fee.....	\$ 2 00
Sessional Fee by ordinary Students.....	15 00
Sessional Fee by occasional or partial Students for each course.....	5 00
Graduation Fee, including Diploma.....	5 00

All of which Fees shall be paid in advance. But Students already on the Books of the University shall not be required to pay any Matriculation Fee, and Students simultaneously attending Lectures in the Faculty of Arts shall be received upon such terms as shall be fixed by that Faculty.

Applications for admission may be made to the Dean of the Faculty or to the Secretary of the College. The classes will be opened on the 6th November, 1866.

This School offers the higher kind of instruction and the mental training which together constitute the foundation of what is called *Liberal Education*. As a Department of the University, it offers a thorough preparation for the College Course.

The Course of Instruction includes the *Latin, Greek, English, French, and German Languages; Geography and History; Arithmetic.*

tic, Algebra, Plane Geometry, Plane Trigonometry with the use of Logarithms, Mensuration, and the Elements of Natural Philosophy Writing & Book-keeping; Drilling & Gymnastics. A Volunteer Rifle Association under Military Drill has been formed of the elder Boys and is recognised by the Military Authorities. The *Religious Instruction* is not sectarian, and attendance upon it is required only from Pupils who are Protestants. Details of the above Course are subjoined in a Programme for the year. An examination of it will shew that, whilst the Latin and Greek Languages have that prominence which necessarily belongs to them in Higher Education, provision is made to impart at the same time a thorough English and Commercial Education, and that French, as being one of the colloquial languages of the country, is much cultivated.

The complete Course extends over a period of six or seven years but Pupils are admitted for any portion of that time into any Form for which, upon examination, they are found qualified.

The Session, which is divided into four equal Terms, commences on the 1st September, and with the exception of a fortnight at Christmas and a few days at Easter, continues to the 1st July.

The full School hours are from 9 to 12½ o'clock, a. m., and 2 to 4 p. m., every day in the week except Saturday, but the time for the Preparatory and the First Forms is shorter by an hour each day.

The School is divided into seven Forms. The Preparatory Form is a Lower School, in which young boys receive the training necessary to fit them for the commencement of the regular Curriculum.

For admission into this Form, it is required that the Pupil shall have attained the age of seven years, and be able to read moderately well. Regular early training is of so great importance that the entrance of a pupil should not be delayed beyond the age of nine. The best time for entrance is at the commencement of the Session, when, owing to the promotions that take place, the classes are remodelled for the year.

The Pupils of the First, Second, Third and Fourth Forms next above the Preparatory are not allowed any option in their studies, but must take the whole course of instruction prescribed for them. The Pupils of the Fifth and Sixth Forms are divided into two "Sides". The "Classical Side" is intended for those boys who desire a more extended and accurate knowledge of the ancient Languages. The "Commercial Side" is adapted for those who are to enter upon

mercantile pursuits. When a Pupil has reached the Fifth form, his Parent or Guardian may select either of these sides for him: but, the choice having been made, the Pupil must pursue all the course of instruction appointed for the side to which he belongs.

Special Reports are sent, whenever it seems necessary, to the Parent or Guardian of any Pupil who has been absent, negligent of any study, or incorrect in his conduct. A Quarterly Report is made of the progress, attendance, and conduct of every Pupil, shewing his rank in his Form for each study.

At the end of each term, Class Examinations are held, both Written and Oral, and at the close of the Session, a Public Examination takes place, followed by a Distribution of Prizes and Award of Honours, the lists being published. The Highest Honour is the Davidson Gold Medal, which is awarded to the Head Boy of the School for the year, provided the Examiners are satisfied that his attainments reach a certain standard.

In the beginning of January a special Examination will be held of Candidates for the School Certificate issued by the University. The Conditions regarding this may be seen by reference to the Calendar of the University.

The Pupils are required to prepare themselves every evening in their work for the ensuing day, as exhibited in a Time-table. *As their progress will depend very much upon the diligent performance of this duty, Parents are particularly requested to allow no arrangements to interfere with it.* Parents having sons at the School are earnestly invited to frequent intercourse with the Masters, so as to aid them in securing that regularity and industry so necessary to success in Education. The classes are visited periodically by a Committee of the Board.

The School Building is in a healthy and airy situation, and has convenient interior arrangements, with those modern improvements which secure proper warmth and ventilation. A very good Gymnasium has been erected in the play-ground adjoining the School.

The Rector, who resides a short distance from the City, has made arrangements to receive a limited number of Pupils of the High School to board with him. Mr. Gibson, Mr. Rodger, Mr. Kemp, and Prof. Darey, Masters of the School, have also accommodation for Boarders.

McGill Normal School.

Affiliated to the McGill University, under the control of the Superintendent of Education and the Corporation of the University.

J. W. DAWSON, LL.D., F.R.S., &c.,—Principal, and Associate Professor of Natural History and Agriculture.

WILLIAM HENRY HICKS, ESQ.,—Ordinary Professor of English Language and Literature.

SAMPSON PAUL ROBINS, B.A.,—Ordinary Professor of Mathematics and Natural Philosophy.

PIERRE J. DAREY, M.A.,—Associate Professor of French.

JAMES MCGREGOR, B.A.,—Instructor in Classics.

MR. JAMES DUNCAN,— “ in Drawing.

MR. R. J. FOWLER,— “ in Music.

MR. JOHN ANDREW,— “ in Elocution.

The Institution is intended to give a thorough training to teachers, especially for the Protestant population of Lower Canada. This end is attained by instruction and training in the Normal School itself, and by practice in the Model Schools; and the arrangements are of such a character as to afford the greatest possible facilities to Students from all parts of the Province.

The Tenth Session of the school will commence on the third of September, 1866, and extend to the first of July, 1867.

The complete course of study extends over three years, and the Students are graded as follows:—

1. *Elementary School Class*.—Studying for the Elementary School Diploma.

2. *Model School Class*.—Studying for the Model School Diploma.

3. *Academy Class*.—Studying for the Academy Diploma.

1. Conditions of Admission.

Candidates for admission into the Junior Class will be required to pass an examination in Reading, Writing, the Elements of Grammar, Arithmetic and Geography. Admission into each of the higher classes requires a knowledge of the subjects of the previous one.

All Students must produce certificates of good moral character from the clergyman or minister of religion under whose charge they have last been, and also testimony that they have attained the age of sixteen years. They will also be required to sign a pledge that they purpose to teach for three years in some public school in Lower Canada.

2. *Privileges of Students.*

On complying with the above conditions, all students will be recognised as *Teachers in Training*; and as such, will be entitled to free tuition, with the use of text books, and to bursaries in aid of their board, not exceeding \$36.00 per annum in the case of those in the two first Classes, or \$80.00 in the case of those in the Academy Class, should they be successful in obtaining the diploma at the final examination. A portion of this allowance will be advanced to such students as are not resident in Montreal, on their passing the semi-sessional examination at Christmas.

Under the regulations subjoined, and with the view of extending the benefits of the school to all parts of the country, those who reside at a distance of more than ninety miles from the city of Montreal, will also be entitled to a small allowance for travelling expenses proportionate to the distance.

Students resident in Montreal may share the bursary fund, on producing certificates from their minister or clergyman that such aid is absolutely necessary to their continuing in attendance at the school.

In addition to religious instruction of a general Protestant character by the Professors, arrangement will be made for special religious instruction by ministers representing the several denominations with which the students may be connected.

No boarding-house is attached to the institution, but every care will be taken to ensure the comfort and good conduct of the students, in private boarding-houses approved by the Principal. Board can be obtained at from \$9 to \$12 per month.

At the close of the first year of study, students may apply for examination for diplomas giving the right to teach in Elementary Schools; and after two years' study, or if found qualified at the close of the first year, they will, on examination, be entitled to diplomas as teachers of Model Schools.

Students having passed the examination in the Model School Class, or having advanced to the requisite knowledge, may go on to the Academy Class, and, on examination, may obtain the Academy Diploma.

The *Prince of Wales Medal and Prize* will be given to the Student taking the highest place in the Model School Class, provided that such Student shall attain to the standard fixed by the Regulations of the Council of Public Instruction for this Medal.

All the preceding regulations and privileges apply to female as well as to male students.

Persons holding the degree of B.A. or M.A. of any University in Lower Canada, may receive the Academy Diploma on passing an examination in the art of teaching, and in such other subjects, necessary to the Academy Diploma, as may not have been included in their University examinations.

3. Course of Study.

1. ELEMENTARY SCHOOL CLASS, STUDYING FOR THE ELEMENTARY SCHOOL DIPLOMA.

With the view of accommodating those who may be unable to enter at the commencement of the Session, or whose previous education may enable them to enter at a more advanced period, the course of study in this class is divided into terms, as follows:—

FIRST TERM, from September 1st to December 20th.

(*Entrance examination as stated above.*)

English—Grammar and Composition so far as to parse syntactically, and write correctly a few short descriptive sentences.—Text-Books, Bullions' Grammar and Parker's Progressive Lessons; Reading and Spelling, Etymology. Penmanship—Elocution.

Geography—So far as to have a good acquaintance with the Map of the World.

History—Outline of Sacred and Ancient History.—History of Canada. Text-Books, White and Roy.

Art of Teaching—Hygiene in its relations to schools.

Arithmetic—Simple and Compound rules, Vulgar and Decimal Fractions and Practice, with explanation and demonstration of rules. Text-Book, Sangster's Arithmetic.

Algebra—The elementary rules, as in the Algebra of Chambers' Educational course.

Geometry—First Book of Euclid.

Chemistry—Introductory Lectures.

French—Elements of Grammar, easy reading and translation. Text-Books, Student's Companion to the study of French. De Fivas' Elementary Reader.

Natural History—Elements of Animal Physiology.

Drawing—Elements and Simple outlines.

Music—Elements of Vocal Music.

SECOND TERM—January 1st to April 1st.

(*Pupils entering at the commencement of this term, will be expected to pass a satisfactory examination in the subjects of the previous term.*)

English—Grammar and Composition, so far as to be able to analyse simple and complex sentences, and to write correctly a short Essay on a familiar subject.—Elocution continued.

Geography—So far as a good acquaintance with the physical features and political divisions of the great continents.

History of England and France. Ancient History.

Arithmetic—Proportion, Per-centage, Exchange, Book-keeping by single entry.

Algebra—Simple Equations of one, two and three unknown quantities.

Geometry—Second and Third books of Euclid.

Chemistry—Non-metallic Elements.

French—Grammar continued, including Reading, Translation, Oral and Written Exercises.

Natural History—Systematic Zoology. Text-Book, Patterson's Zoology for schools.

Drawing—Landscape, &c., in pencil.

Music—Vocal music continued.

THIRD TERM—April 1st to July 1st.

(Pupils entering at the commencement of this term, will be expected to pass a satisfactory examination in the subjects of the two previous terms.)

English—Advanced Lessons in Grammar and Composition—Elocution continued.

Geography and History—Advanced Lessons, with use of Globes, and recapitulation of previous parts of the course.

Art of Teaching—School studies and management.

Arithmetic—Conclusion of Commercial Arithmetic, and General Recapitulation.

Algebra—Quadratic Equations and Recapitulation.

Geometry—Recapitulation and Deductions.

Chemistry—Metallic Elements.

French, Natural History, Drawing and Music—Continued as in the previous term.

Religious Instruction will be given throughout the Session.

2. MODEL SCHOOL CLASS, STUDYING FOR THE MODEL SCHOOL DIPLOMA.

(Students entering this Class must have passed a satisfactory examination in the subjects of the Junior Class. The Class will pursue its studies throughout the Session, without any definite division into terms.)

Elocution.

Drawing.

EXTRACTS FROM THE REGULATIONS.

Special Regulations for admission of Pupil-teachers.

Article First—Any person desirous of being admitted as a pupil-teacher, must apply to the Principal of the Normal School, who, on his producing an extract from the Register of Baptisms, or other evidence, showing that he is fully sixteen years of age, with the certificate of character and conduct required by the 16th article of the general Rules and Regulations, approved by His Excellency the Governor General in Council, on the 22nd December, 1856, shall examine the candidate.

If upon his examination, it is found that the candidate can read and write sufficiently well, knows the rudiments of Grammar in his mother tongue,—Arithmetic as far as the rule of three inclusively, and has some knowledge of Geography, the Principal shall grant him a certificate.

Article Second.—The candidate having thus obtained the certificate of the Principal, shall then, (in the presence of two witnesses who, with the Principal, shall countersign the same,) sign an application in writing for admission containing the declaration required by the 23rd general regulation. This shall be forwarded to the Superintendent of Schools, together with all the certificates and other documents required, and if the whole be found correct the Superintendent shall cause the name of the candidate to be inscribed in the register, and notice thereof shall be given to the Principal.

Article Third.—The pupil-teachers shall state the place of their residence, and those who cannot reside with their parents, will be permitted to live in boarding-houses, but in such only as shall be specially approved of. No boarding-houses having permission to board male pupil-teachers, will be permitted to receive female pupil-teachers as boarders, and *vice versa*.

Article Fourth.—Every pupil-teacher on passing the examinations, will be allowed a sum not exceeding £9, to assist in paying his board.*

Article Fifth.—Every pupil residing at a distance of more than ninety miles from the City of Montreal, shall be entitled to receive an allowance for travelling expenses, proportionate to the distance, but not to exceed two pounds ten shillings *per annum*.

* Except in the case of Teachers training for the Academy Diploma, who may receive a sum not exceeding £20.

Article Sixth.—The total amount of allowances paid to pupil-teachers under the foregoing articles shall not exceed £333 6s. 8d. currency, yearly—that being the sum granted for this object; and when the whole of this amount is appropriated, each pupil-teacher as may apply for admission shall not be entitled to any portion thereof, until vacancies shall occur.

Special Regulations for Government and Discipline.

Article First.—Pupil-teachers guilty of drunkenness, of frequenting taverns, of entering disorderly houses or gambling houses, of keeping company with disorderly persons, or of committing any act of immorality or insubordination, shall be expelled.

Article Second.—There shall be no intercourse between the male and female pupil-teachers while in the school, or when going to, or returning from it. Teachers of one sex are strictly prohibited from visiting those of the other.

Article Third.—They are on no account to be absent from their lodgings after half past nine o'clock in the evening.

Article Fourth.—They will be allowed to attend such lectures and public meetings only as may be considered by the Principal conducive to their moral and mental improvement.

Article Fifth.—Proprietors of boarding-houses authorized by the Principal, shall report to him any infraction of the rules, with which they may become acquainted.

Article Sixth.—The Professors shall have the power of excluding from the lectures for a time, any student who may be inattentive to his studies or guilty of any minor infraction of the regulations.

Article Seventh.—Pupil-teachers shall be required to state, with what religious denomination they are connected; and lists of the students connected with each denomination shall be furnished to one of the ministers of such denomination resident in Montreal, with a request that he will meet weekly with that portion of the pupil-teachers or otherwise provide for their religious instruction.

Every Thursday afternoon, after four o'clock, will be assigned for this purpose.

Article Eighth.—In addition to punctual attendance at the weekly religious instruction, each student will be required to attend public worship at his own church, at least every Sunday.

Any additional information that may be desired, may be obtained on application to the Principal, or to either of the Professors.

Πρόξενον δὲ τῶν Βοιωτῶν ξένον ὄντα αὐτῷ ἐκέλευσε λαβόντα ἄνδρας ὅτι πλείστοις παραγενέσθαι, ὡς εἰς Πισίδας βουλόμενος στρατεῦσθαι, ὡς πράγματα παρεχόντων τῶν Πισιδῶν τῇ αὐτοῦ χώρα. Σοφαίνετον δὲ τὸν Στυμφάλιον καὶ Σοκράτην τὸν Ἀχαιόν, ξένους ὄντας καὶ τούτους, ἐκέλευσεν ἄνδρας λαβόντας εἰλθεῖν ὅτι πλείστοις, ὡς πολεμήσων Τισσαφέρνει σὺν τοῖς φυγαῖσι τῶν Μιλησίων, καὶ ἐποίουν οὕτως οὗτοι.

(β) Κῦρος δὲ συγκαλέσας τοὺς στρατηγούς εἶπεν, Ἀπολελοίπασιν ἡμᾶς Ξένιας καὶ Πασίων· ἄλλ' εὐ γε μίντοι ἐπιστάσθωσαν ὅτι οὔτε ἀποδεδράκασιν. οἶδα γὰρ ὅπῃ οἰχονται· οὔτε ἀποπεφύγασιν· ἔχω γὰρ τριήρεις ὥστε ἐλεῖν τὸ ἐκείνων πλοῖον· ἄλλὰ μὰ τοὺς θεοὺς οὐκ ἔγωγε αὐτοὺς διώξω, οὐδ' ἐρεῖ οὐδεὶς ὡς ἐγὼ ἰὼς μὲν ἂν παρῇ τις χρώμαι, ἐπειδὴν δὲ ἀπίεμαι βούληται, σὺν λαβὼν καὶ αὐτοὺς κακῶς ποιῶ καὶ τὰ χρήματα ἀποσυλῶ. ἀλλὰ ἰόντων, εἰδότες ὅτι κακίους εἰσὶ πρὸς ἡμᾶς ἢ ἡμεῖς πρὸς ἐκείνους. καίτοι ἔχω γε αὐτῶν καὶ τέκνα καὶ γυναῖκας ἐν Τράλλεσι φρουρούμενα· ἄλλ' οὐδὲ τούτων στερήσονται, ἀλλ' ἀπολήψονται τῆς πρόσθεν ἔνεκα περὶ ἐμὲ ἀρετῆς. καὶ ὁ μὲν ταῦτα εἶπεν· οἱ δὲ Ἕλληνες, εἰ τις καὶ ἀνημιότερος ἦν πρὸς τὴν ἀνάβασιν, ἀκούοντες τὴν Κύρου ἀρετὴν ἤδιον καὶ προθυμότερον συνεπορεύοντο.

(γ) ἱππεὶ δὲ κατεπέμφθη ὑπὸ τοῦ πατρὸς σατράπης Λυδίας τε καὶ Φρυγίας τῆς μεγαλῆς καὶ Καππαδοκίας, στρατηγὸς δὲ καὶ πάντων ἀπεδείχθη οἷς καθήκει εἰς Καστωλοῦ πλοῖον ἀνδροῖσθαι, πρῶτον μὲν ἐπίδειξεν αὐτὸν ὅτι περὶ πλείστον τοιοῦτο, εἰ τῷ σπείσαιοτο καὶ εἰ τῷ συνδοῖτο καὶ εἰ τῷ ἐπόσχοιτό τι, μηδὲν ψεύδασθαι. καὶ γὰρ οἱ ἐπίστινον μὲν αὐτῷ αἱ πόλεις ἐπιτρεπόμεναι, ἐπίστευον δ' οἱ ἄνδρες· καὶ εἰ τις πολέμιος ἰγίνετο, σπείσασιν Κῦρον ἐπίστενε μηδὲν ἂν παρὰ τῆς σπουδῆς πανθῆναι. τοιγαροῦν ἱππεὶ Τισσαφέρνει ἰπολήμας, πᾶσαι αἱ πόλεις ἐκείσαι Κῦρον εἴλοντο ἀντὶ Τισσαφέρνηος πλὴν Μιλησίων· οὗτοι δὲ ὅτι οὐκ ἔστιν αὐτοῖς φείδοντας προϊσθαι ἰφοβοῦντο αὐτὸν. καὶ γὰρ ἔργῳ ἐπεδείκνυτο καὶ ἔλεγον ὅτι οὐκ ἂν ποτε προῖτο, ἱππεὶ ἀπαξ φίλος αὐτοῖς ἰγίνετο, οὐδ' εἰ ἐτι μὴν μόνος γίνετο, εἰ δὲ κήκιον πράξιεν.

(a) Magna dis immortalibus habenda est atque huic ipsi Iovi Statori, antiquissimo custodi huius urbis, gratia, quod hanc tam taetram, tam horribilem tamque infestam rei publicae pestem toties, iam effugimus. Non est saepius *in uno homine* summa salus periclitanda rei publicae. Quam diu mihi consuli designato, Catilina, insidiatus es, non publico me praesidio, sed privata diligentia defendi. Quum proximis comitiis consularibus me consulem in campo et competitores tuos interficere voluisti, compressi conatus tuos nefarios amicorum praesidio et copiis, nullo tumultu publice concitato: denique, quotienscumque me petisti, per me tibi obstiti, quamquam videbam perniciem meam cum magna calamitate rei publicae esse coniunctam. Nunc iam aperte rem publicam universam petis; templa deorum immortalium, tecta urbis, vitam omnium civium, Italiam totam ad exitum ac vastitatem vocas. Qua re quoniam id, quod est primum et quod *huius imperii* disciplinaeque maiorum proprium, facere nondum audeo, faciam id, quod est ad severitatem lenius et ad communem salutem utilis. Nam si te interfici iussero, residuebit in re publica reliqua coniuratorum manus. Sin tu, quod te iam dudum hortor, exieris *exhaurietur* ex urbe tuorum comitum magna et perniciosa *sentinu* rei publicae.

(b) Quibus ego confido impendere fatum aliquod et poenam iamdiu improbitati, nequitiae, sceleri, libidini debitam aut instare iam plane aut certe appropinquare. Quos si meus consulatus, quoniam sanare non potest, sustulerit, non breve nescio quod tempus, sed multa saecula propagarit rei publicae. Nulla est enim natio quam pertimescamus, nullus rex qui bellum populo Romano facere possit. Omnia sunt externa *unius civitate* terra marique pacata: domesticum bellum manet, intus insidiae sunt, intus inclusum periculum est, intus est hostis. Cum luxuria nobis, cum amentia, cum scelere certandum est. Huic ego me bello ducem profiteor, Quirites: suscipio inimicitias hominum perditorum: quae sanari poterunt, quacumque ratione sanabo: quae resecanda erunt, non patiar ad perniciem civitatis manere. Proinde aut excant aut quiescant aut, si et in urbe et in eadem mente permanent, ea quae merentur expectent.

(c) Introduxi Vulturcium sine Gallis: fidem publicam iussu senatus dedi: hortatus sum, ut ea, quae sciret, sine metu indicaret. Tum ille dixit, quum vix se ex magno timore recreasset, a P. Lentulo se habere ad Catilinam *mandata et litteras*, ut servorum praesidio uteretur, et ad urbem quam primum cum exercitu accederet: id autem eo consilio, ut, quum urbem ex omnibus partibus, quem ad modum descriptum distributumque erat, incendissent caedemque infinitam civium fecissent, praesto esset ille qui et fugientes exciperet et se cum his urbanis ducibus coniungeret. Introducti autem Galli ius iurandum sibi et litteras ab Lentulo, Cethego, Statilio ad suam gentem data esse dixerunt, atque ita sibi ab his et a L. Cassio esse praescriptum, ut equitatum in Italiam quam primum mitterent: pedestres sibi copias non defuturas: Lentulum autem sibi confirmasse *ex fatis Sibyllinis* haruspicumque responsis esse

se illum tertium Cornelium, ad quem regnum huius urbis atque imperium pervenire esset necesse: Cinnam ante se et Sullam fuisse: eundemque dixisse fatalem hunc annum esse ad interitum huius urbis atque imperii, qui esset annus decimus post virginum absolutionem, post Capitolii autem incensionem vicesimus.

2. *a.* Write a sketch of the life of Cicero. *b.* Narrate briefly the circumstances attending the delivery of these orations, severally. *c.* What was the fate of the conspirators?

3. *Ante diem duodecimum kalendus Novembris.*—Explain the construction, and state which noun the preposition *ante* governs:—What part of speech and what case is *Novembris*? Name the divisions of the Roman month, and the days on which they respectively commenced. To what day of what month, according to *our* mode of reckoning, does the above-mentioned day correspond?

4. Explain the syntactical construction of the following sentences, and state the rules illustrated:—*a.* Reperti sunt duo equites qui te ista cura liberarent. *b.* Quas omnes impendere tibi proximis Idibus senties. *c.* Non putent esse suae dignitatis recusare. *d.* Latius opinione disseminatum est malum. *e.* Ut Catilina paucis ante diebus erupit ex urbe. *f.* Non summo supplicio mactari imperabis? *g.* Sed est mihi tanti. Operae pretium est.

5. Write short explanatory notes on the following, and on the words printed in italics in extracts (*a*) (*b*) and (*c*):—*Pro clientelis hospitibusque provincialibus.* *b.* Omnis *ingenuorum* multido: *libertinorum* hominum. *c.* *Purpuratum* huic Gabinium. *d.* Ad omnia *pulvinaria supplicatio* decreta est. *e.* In *custodiam* dedisti. *f.* *Fidem publicam* jussu Senatus dedi. *g.* In *campo*, in *foro*, in *curia*.

6. Analyse and parse the following verbs:—*Inusta*, *adulta*, *prostratus*, *perculsum*, *profuderunt*, *memineritis*, *reppuleris*, *manavit*, *obtigerit*, *decreta*, *obstupuerant*, *incidimus*, *rettudimus*.

7. Explain the composition and derivation of the following words, giving also the cognate forms in Greek and English of such as have them:—*Consul*, *adipes*, *provincia*, *sellae*, *lectulum*, *instrumentum*, *taberna*, *nudiustertius*, *contionem*, *praeceps*, *statua*, *simulacra*, *argumenta*, *pecudes*, *debiles*, *popina*.

8. State the difference in meaning between:—(1) *Locare* aliquid ad faciendum and *conducere* aliquid ad faciendum. (2) *Rem referre* ad senatum and *rem deferre* ad senatum. (3) *Cuesaris* similes and *Cuesari* similes. (4) *Orbis terrae* and *orbis terrarum*. *b.* Mark the quantity of the *penultimate* of the following:—*Pristinam*, *maritimus*, *infamis*, *parricida*, *illecebra*, *plaga* (*stroke*), *plaga* (*district*), *nitere* (*imperat.*), *nitere* (*fut.*). *c.* What is the quantity of the *ultimate* of the possessive pronouns in such expressions as *mea*, *vestra*, *nostra*, *interest* and *refert*? In what case is the pronoun? Analyse and explain the expression.

9. Decline the following nouns:—*Deus*, *securis*, *opus*, *nix*, *lacus*. *b.* Write down the Comparative and Superlatives of the following adjectives:—*Brevis*, *multus*, *dives*, *externus*, *pulcher*, *utilis*, *similis*. *c.* Write down the Perfects and Supines of the following verbs:—*Plico*, *pendeo*, *mordeo*, *fleo*, *quæro*, *haurio*, *sepio*, *figo*.

10. With what class of verbs is the Accusative with the Infinitive used? What is the fundamental rule for the use of the tenses of the Subjunctive in dependent clauses? Distinguish between *vereor ne* and *vereor ut*. Write down the interrogative particles, and give their strict meaning.

(a) Virtus est vitium fugere et sapientia prima
Stultitia caruisse. Vides, quæ maxima credis
Esse mala, exiguum censum turpemque repulsam,
Quanto devites animi capitisque labore ;
Impiger extremos curris mercator ad Indos,
Per mare pauperiem fugiens, per saxa, per ignes :
Ne cures ea, quæ stulte miraris et optas,
Discere et audire et meliori credere non vis ?
Quis circum pagos, et circum compita pugnax
Magna coronari contemnat Olympia, cui spes,
Cui sit conditio dulcis sine pulvere palmæ ?
Vilius argentum est auro, virtutibus aurum.
“ O cives, cives, quærenda pecunia primum est ;
Virtus post nommos.” Hæc Janus summus ab imo
Prodocat, hæc recinunt juvenes dictata senesque
Lævo suspensi loculos tabulamque lacerto.
Est animus tibi, sunt mores et lingua fidesque,
Sed quadringentis sex septem millia desunt :
Plebs eris. At pueri ludentes, “ Rex eris,” aiunt,
“ Si recte facies.” Hic murus æneus esto :
Nil conscire sibi, nulla pallescere culpa.

(b) Albi, nostrorum sermonum candide iudex,
Quid nunc te dicam facere in regione Pedana ?
Scribere quod Cassi Parmensis opuscula vincat,
An tacitum silvas inter reptare salubres,
Curantem quidquid dignum sapiente bonoque est ?
Non tu corpus *eras* sine pectore. Dî tibi formam,
Dî tibi divitias dederunt artemque fruendi.
Quid voveat dulci nutricula majus alumno,
Qui sapere et fari possit quæ sentiat, et cui
Gratia, fama, valetudo contingat abunde
Et mundus victus, non deficiente crumena ?
Inter spem curamque, timores inter et iras,
Omnem crede diem tibi diluxisse supremum ;
Grata superveniet, quæ non sperabitur, hora.
Me pinguem et nitidum bene curata cute vises,
Quam ridere voles, Epicuri de grege porcum.

(c) Sed neque, qui Capua Romam petit, imbre lutoque
 Adpersus volet in caupona vivere; nec, qui
 Frigus collegit, furnos et balnea laudat
 Ut fortunatam plene præstantia vitam.
 Nec, si te validus jactaverit Auster in alto,
 Idcirco navem trans Ægæum mare vendas.
 Incolumi Rhodos et Mytilene pulchra facit, quod
 Pænula solstitio, campestre nivalibus auris,
 Per brumam Tiberis, Sextili mense caminus.
 Dum licet ac vultum servat Fortuna benignum,
 Romæ laudetur Samos et Chios et Rhodos absens.
 Tu, quamcunque Deus tibi fortunaverit horam,
 Grata sume manu, neu dulcia differ in annum,
 Ut, quocunque loco fueris, vixisse libenter
 Te dicas; nam si ratio et prudentia curas,
 Non locus effusi late maris arbiter aufert,
 Cælum, non animum mutant, qui trans mare currunt.
 Strenua nos exercet inertia; navibus atque
 Quadrigis petimus bene vivere. Quod petis, hic est,
 Est Ulubris, animus si te non deficit æquus.

(d) Hoc quoque te manet, ut pueros elementa docentem

 Ut quantum generi demas, virtutibus addas;
 Me primis Urbis belli placuisse domique;
 Corporis exigui, præcanum, solibus aptum,
 Irasci celerem, tamen ut placabilis essem.
 Forte meum si quis te percontabitur ævum,
 Me quater undenos sciat implevisse Decembres,

1. Given three right lines, any two of which are greater than the third, construct a triangle whose sides shall be respectively equal to them.

2. To a given right line apply a parallelogram equal to a given rectilinear figure, and having an angle equal to a given one.

a. Given the area of a rectangle and the length of one side, find the other.

3. If a line be divided into any two parts, the sum of the squares of the whole line and one part, is equal to twice the rectangle under the whole line and that part, together with the square of the other part.

a. The square of the sum of any two lines exceeds the sum of the squares by as much as the sum of the squares exceeds the square of the difference.

4. Divide a right line into two parts, so that the rectangle under the whole line and one part shall be equal to the square of the other.

5. Give Euclid's definition of a tangent to a circle, and prove that the tangent must be perpendicular to the radius at the point of contact.

a. Give the modern definition and prove the same property from it.

6. On a given right line construct a segment of a circle which shall contain an angle equal to a given angle.

7. If two triangles have an angle in each equal, and the sides about the equal angles proportional, the triangles are similar.

8. Find a mean proportional between two given right lines.

9. A bar of gold is 4.17 inches long, 0.64 inches wide, 0.31 inches deep; a bar of silver is 13.22 inches long, 1.14 inches wide, 0.65 inches deep; find the ratio of the weight of the first bar to that of the second, if the weights of any equal bulks of gold and silver be in the ratio of 19.35 to 10.51.

10. Add $\frac{1}{4} + 3\frac{1}{5} + 6\frac{7}{8}$; reduce the result to a decimal form, and divide it by the half of $\frac{2}{3}$ of 4.

11. Find a number such that the square of it shall be one-and-a-half times 35.

12. Find the interest on \$3450.35, for 135 days, at $6\frac{1}{2}$ per cent. per annum.

13. Reduce £456 13s. 4d. sterling to currency; £1 sterling being worth \$4.866, and a dollar being worth 5 shillings currency.

14. Find how much per cent. is 53 of 65?

EUCLID—ALGEBRA—TRIGONOMETRY.

SECOND YEAR.

Examiner.....ALEXANDER JOHNSON, LL.D.

1. If a parallelogram and a triangle be on the same base and between the same parallels, the parallelogram is double the triangle.

a. The area of a triangle is equal to half the rectangle under the base and altitude.

2. If a right line be bisected and produced, the rectangle under the whole line thus produced and the produced part, together with the square of half the line, is equal to the square of the line made up of the half and the produced part.

a. If a right line be drawn from the vertex of an isosceles triangle to the base or base produced, the difference of the squares of this line and one side is equal to the rectangle under the segments of the base.

3. If at any point of a circle a tangent and a chord be drawn, the angle between them is equal to the angle in the alternate segment.

a. How could this be deduced from Prop. 22, Bk. III?

4. Inscribe a regular hexagon in a circle.

5. In equal circles, angles whether at the centres or circumferences are in the same ratio as the arcs on which they stand.

6. Divide $8a^4 - 12a^3x + 11a^2x^2 - 8ax^3 + 8x^4$ by $2a^2 - 3ax + 2x^2$.

7. Divide a line 60 inches long into 3 parts, such that the second may be double of the first, and the third triple of it.

8. Multiply $a^3 + a^{\frac{1}{2}}b^{\frac{1}{2}} + a^{\frac{1}{2}}b + b^3$ by $a^{\frac{1}{2}} - b^{\frac{1}{2}}$.

9. Solve the equations.

$$\sqrt{11}x^2 - \frac{2}{3}x = \sqrt{5}(11x + 15);$$

$$\frac{ax}{b(x+c)} + \frac{bx}{a(x+c)} = 1;$$

$$\frac{x-3}{x+2} = \frac{1}{2} + \frac{x-3}{2x-1};$$

$$5x + 3y = 65, 2y - z = 11, 3x + 4z = 57.$$

10. Prove the following formula connecting the base of a triangle with the two sides and included angle by means of an auxiliary angle ϕ :

$$c = (a + b) \sin \phi; \cos^2 \phi = \frac{4ab \cos^2 \frac{1}{2} C}{(a + b)^2}.$$

11. In order to find the distance of two headlands, I measure their distances from a point inland, 2 miles 340 yards, and 3 miles 685 yards respectively; the angle they subtend at this point is $54^{\circ} 32' 40''$, what is their distance?

12. The angle which a man's height subtends at the eye is $10'$. Assuming his height to be 6 feet; what is his distance?

13. Prove $\tan. (A \pm B) = \frac{\tan. A \pm \tan. B}{1 \mp \tan. A \tan. B}$

14. Prove $\sin. \frac{1}{2} A = \sqrt{\frac{(s-b)(s-c)}{bc}}$

15. Given $\sin. A = \frac{1}{3}$ find $\tan. A$; and prove the formula from which you obtain it.

Examiner.....ALEXANDER JOHNSON, LL.D.

1. If two forces lie in the same plane, their moments with respects to any point situated on their resultant are equal and opposite, whether the forces be parallel or not.

a. Is there any exception to the above general statement?

2. Find the centre of gravity of the perimeter of a triangle, and show that it is the centre of the circle inscribed in the new triangle formed by joining the three points of bisection of the sides.

3. A weight of 17 lbs. just balances a weight of 79 lbs, on a wheel and axle. Find the radius of the axle, if that of the wheel be 17 inches, and prove the mechanical principle you may employ in your calculation.

4. Find the ratio of the power to the vertical resistance in the screw.

a. If the interval between the threads of a screw be $\frac{1}{10}$ th of an inch, and the circumference of the circle described by the power be 2 feet, what resistance will a power of 13 lbs. sustain?

5. Apply the principle of the constancy of work done to find the ratio of the power to the resistance in the case of the inclined plane.

6. Prove the following equations for uniformly accelerated motion:—

$$v = ft; s = \frac{ft^2}{2}; v^2 = 2fs.$$

a. Explain what is meant by saying that the dynamical measure of the force of gravity is 32 feet per second.

7. If a body weighing W tons move uniformly with a velocity v in a circle of radius r ; calculate the centrifugal force in tons, assuming only the laws of motion.

8. Calculate the velocity acquired by a heavy body falling down a circular arc.

9. State and explain the principle of the Bramah press, and describe the method of overcoming the practical difficulty in its application.

10. Describe the construction of the mercurial barometer and show how it measures the atmospheric pressure.

11. Describe the proof of Boyle and Mariotte's law.

12. If a homogeneous body float in a liquid, its whole volume will be to that of the part immersed, in the inverse ratio of the specific gravities of the body and liquid.

ASTRONOMY—OPTICS—MECHANICS—HYDROSTATICS.

FOURTH YEAR.

Examiner.....ALEXANDER JOHNSON, LL.D.

1. Investigate a method for finding the ratio of the Mass of the Sun to the Mass of the Earth.
2. Describe the manner in which the weight of the Earth was found from observations on Schehallien.
3. What is the object of correcting for parallax? Investigate a method for doing it?
4. Define Latitude and Longitude, terrestrial and celestial. Define Right Ascension, Declination, North Polar Distance, Altitude, Azimuth Zenith Distance, Prime Vertical. Explain any two methods (one for each) for finding the latitude and longitude of a place on the Earth.
5. Describe the common Astronomical Telescope, and find its magnifying power.
6. Prove the principle of Hadley's Sextant, and describe the instrument.
7. Find the deviation in a ray of light falling almost perpendicularly on a thin prism. What is the application of the formula?
8. State the laws of refraction and reflection, and describe the experimental methods of proof.
9. Give Duchayla's proof of the principle of the composition of forces.
10. In the inclined plane, if the power be parallel to the base, find the ratio of the power to the resistance.
11. The spaces passed through by a body falling in vacuo in successive seconds are proportional to the series of odd numbers.
12. If a pendulum swinging in London ($g = 32.1908$) be 45 inches long, by how much will its rate be accelerated in one day if the bob be screwed up one turn, the screw having 32 threads to the inch?
13. Describe the siphon manometer and the mode of graduating its scale.
14. Define the specific gravity of a gas, and assuming Dalton and Guy-Lussac's, and Boyle and Mariotte's laws, state what further data are necessary to determine the weight of a given volume of gas at a given temperature and pressure.
15. Describe the method of using the specific gravity bottle, and show how the constants may be determined.
16. If a cubical vessel be filled with liquid, calculate the ratio of the pressures against the bottom and one of the sides.

LIGHT.

THIRD AND FOURTH YEARS.

Examiner.....ALEXANDER JOHNSON, LL.D.

1. State and explain the law of the variation of the intensity of the light emanating from a luminous point, as depending on distance?
 - a. If the intensity of a given pencil of rays falling perpendicularly on a surface of given area, be calculated by this law, explain how the result must be modified, if the surface be placed obliquely to the light?
2. Describe and explain the effect of a parabolic reflector on light placed in the focus. How are the effects modified in the application, in light-houses?
3. If an object, placed at a great distance in front of a concave spherical mirror, be moved in up to the surface of the mirror, describe the successive positions, and magnitudes of the image, and other phenomena connected with it, and explain them.
4. Define total reflection, and describe an illustration of it.
 - a. State and explain the phenomena of the Mirage.
5. Describe experiments proving the compound character of solar light.
6. To what are the colours of bodies due? State the proof.
7. Describe the spectroscope, and explain the principles on which its utility depends. State generally how it has been employed in investigating the constitution of the sun and the nebulae; and give the results.
8. Draw a diagram illustrating the relative intensities of the luminous, heating, and chemical effects in the solar spectrum.

2. Give the three classes (with examples of each class) into which the Celtic elements of modern English may be divided.
3. Give some examples of, 1. Common names derived from names of places; 2. of words which, radically the same, have double forms, the one from the original source, the other from the language, through which the word has come to us.
4. Show that Etymology, often a help to the meaning of words, is nevertheless not always a sufficient guide for the use of them.
5. Give the dates of the principal invasions of the German tribes; the leaders in each invasion, and respectively the parts of Britain in which settlements were made.
6. Which are the four sources of information on the date of the introduction of words into English?
7. How many elementary Sounds are there in English?—which are the semi-vowel Sounds?—the Liquids?—the Sharp and flat Sounds?
8. Give examples of the different modes of forming plurals in English.
9. Which are the relative pronouns in common and in occasional use?—and state any peculiarities observable in their use.
10. Are there any adjectives in English that mark, by their termination, their agreement with nouns?
11. What adjectives admit of no comparative degree?
12. What are meant by “Cognate accusatives?”
13. What kind of verbs admit of a passive form with the person as the subject, and the thing as the object?
14. What are reflexive verbs?
15. What are “neuter passives” and “impersonal verbs?”
16. Which were the original forms whence we derive the form in “ing?”
17. Which are the circumstances generally, that determine the use of “Shall” and “Will?”
18. To what facts is the frequent recurrence of adjective forms as adverbs, to be ascribed?
19. Which are the classes into which co-ordinate conjunctions are divided?
20. Describe the method of analysing sentences—simple, complex, compound.
21. Analyze, according to the form given, the following sentences:—
“He was a man in office and authority, whom many approached as solicitors, the equity of whose decisions many waited for with anxiety, and who might expect, accordingly as he should conduct himself, to be pursued with curses, or looked up to with thoughts of gratitude and blessing, by multitudes.”

Le plus honnêtement (1) du monde avecque moi.

Molière, *Le Misanthrope*.

(1) Quelle est la signification propre des mots *mystère*, *veut naître*, *complexions*, *honnêtement* ? Que veulent-ils dire dans le morceau ci-dessus ?

(2) En a-t-il la même signification dans ces deux endroits ? A quelle partie du discours appartient ce mot ?

(3) Comment appelez-vous ces expressions : *faire quelque figure* ; et *en user avec moi* ?

2. Quels caractères Molière a-t-il voulu tourner en ridicule dans les personnages, ALCESTE et ORONTE ?

3. Analysez grammaticalement les deux premiers vers du morceau ci-dessus.

4. Qu'est-ce que le *mode* ? Combien y en a-t-il ? Nommez-les.

5. Qu'entend-on par le radical d'un verbe ? Quel est le radical des verbes *écarter*, *rendre*, *exercer*, *apprendre* et *s'examiner* ?

6. Qu'appelez-vous temps dérivés ? L'*impératif*, l'*imparfait* de l'*indicatif* et le *passé défini* sont-ils primitifs ou dérivés ? S'ils sont primitifs quels temps forment-ils ? s'ils sont dérivés, desquels sont-ils formés ?

7. Traduisez en français :

Molière's productions possess this power of engaging the fancy, and furnishing ever renewed pleasure. He is an author whom you are perpetually induced to re-read ; whose writings never cloy ; and whose good things, when once you have made acquaintance with them inspire a wish for their perpetual enjoyment. They are sufficiently excellent to impress themselves well upon the memory, and yet they have the super-added excellence of striking you with renewed effect when you re-peruse them.

9. Traduisez en français :

Michel Cervantes, the celebrated author of Don Quixote, was, in the early part of his life, for about five years, a slave in Algiers, and during his slavery he contrived a plan to free himself and thirteen fellow-sufferers. One of them however treacherously betrayed the design, and they were all taken before the Dey of Algiers, who promised them their lives on condition that they discovered the contriver of the plot. "I am that person," exclaimed the intrepid Cervantes; "save my companions and let me perish if I deserve it." The Dey, struck with his noble confession, spared his life, allowed him to be ransomed, and permitted him to depart home.

It is a curious coincidence that this celebrated author died on the very same day when our Shakespere terminated his mortal career, April 23rd 1616.—*Life of Cervantes.*

I. ORONTE à *Alceste*.

Mais, pour vous, vous savez quel est notre traité,
Parlez-moi, je vous prie, avec sincérité.

ALCESTE.—Monsieur cette matière est toujours délicate,
Et sur le bel (1) esprit nous aimons qu'on nous flatte.
Mais un jour, à quelqu'un dont je tairai le nom,
Je disais (2), en voyant des vers de sa façon,
Qu'il faut (3) qu'un galant homme ait (4) un grand empire,
Sur les démangeaisons qui nous prennent d'écrire :
Qu'il (5) doit tenir la bride aux grands empressements
Qu'on (6) a de faire éclat de tels amusements ;
Et que, par la chaleur de montrer ses ouvrages,
On s'expose à jouer de mauvais personnages.

LE MISANTHROPE, ACTE 1, SCÈNE II.

(1) Why is this adjective written so ?

(2) Why is this verb in the Imperfect tense ? Give the rule. What is the Imperative ?

(3 and 4) What are the Infinitive, the Future, and Present of the Subjunctive of these verbs ? What kind of verb is *faut* in French ? Why is *ait* used in this mood ?

(5 and 6) What part of speech are *il* and *on* ? For what noun are they used ?

II. Translate into English these expressions taken from the *Bourgeois Gentilhomme* and *Le Misanthrope*.

Est-ce que nous sommes de la côte de St. Louis ? Un grand malitorne. Quelle bizarrerie. Non, je ne me dédis point. Ma complaisance est sur tous épanchée. Son ton de fausset. La fleurette est mignonne. Votre ardeur est pour moi sans seconde. Mais il ne tient qu'à vous que son chagrin ne passe.

III. Which of the two comedies of Molière—*le Bourgeois Gentilhomme* and *le Misanthrope* do you prefer ? State your reasons for that preference ?

IV. Translate into French :

I had five penknives, but I have lost two. Do you wish to see the letter my brother has written. The boys will be punished. What mistake have they made ?

State the rules according which each Past Participle must be written in the above sentences.

V. In what verbs do you double the *i* in the first and second persons plural of the Imperfect, of the Indicative, and Present of the Subjunctive ? Give two examples.

VI. Why do you write *appelle* with two *ll* although the Infinitive *appeler* has only one ? Give the rule.

VII. Write the primitive tenses (one person only) of the verbs, *acquérir*, *boire*, *connaître*, *coudre*, *dire*, *mourir*, *naître*, *faire* and *lire*.

VIII. Translate into French :

LAFONTAINE.

Of the works of this author, nothing can be recommended except his fables. In these he has surpassed every other writer, and the name of the inimitable Lafontaine has been given him by common consent. His fables are perfectly natural, without the least affectation, and replete with wit.

Qu'on (1) ne peut excuser, quoiqu'on en ait envie ;
Et je me vis contrainte à demeurer d'accord
Que l'air dont vous viviez vous faisait un peu tort,
Qu'il (2) prenait dans le monde une méchante face,
Qu'il n'est fâcheux conte que partout on n'en fasse,
Et que, si vous vouliez, tous vos départements
Pourraient (3) moins donner prise aux mauvais jugements.
Non que j'y croie au fond l'honnêteté blessée :
Me préserve le ciel d'en avoir la pensée !
Mais aux ombres du crime on prête aisément foi,
Et ce n'est pas assez de bien vivre pour soi.

LE MISANTHROPE, ACTE III, SCÈNE V.

(1 et 2) Quel est l'étymologie de *on* ? Par quels mots le traduit-on en anglais ? A la place de quel nom *il* est-il employé ?

(3) A quel temps est ce verbe ? De quel temps manque-t-il ? Comment font le participe passé et présent du subjonctif ?

II. Traduisez en anglais les expressions suivantes tirées du *Misanthrope* :
Votre esprit se gendarme contre ce qu'on dit. Injurier les personnes qu'on aime. Oronte et lui se sont tantôt bravés. Je n'en démordrai point. Ne vous enflez point d'une si grande gloire. Vous bravez ce témoin convaincant ! Il faut plier bagage. Détrompez-vous, de grâces, et portez-le moins haut.

III. En quoi l'intérêt de la comédie *Le Misanthrope* consiste-t-il ? Quels en sont les scènes les plus intéressantes ? Nommez cinq caractères différents représentés dans cette pièce, et dites quels sont les personnages qui les représentent.

IV. Quels sont les verbes de la quatrième conjugaison qui perdent le *d* du radical, qu'ils ont à l'infinitif ? Donnez-en deux exemples.

V. Quels sont les verbes qui prennent trois *e* au féminin du participe passé ? Citez-en deux exemples ?

VI. Dans quelle acception les verbes *ressortir* et *saillir* sont-ils réguliers ? Donnez-en des exemples ?

VII. Ecrivez les temps primitifs (une personne seulement) des verbes : *savoir*, *dire*, *échoir*, *faire*, *vaincre*, *oindre* et *surseoir*.

VIII. Quand le mot *que* est-il pronom ? Quand est-il adverbe, et quand conjonction ? Donnez des exemples où il se trouve à chacune de ces parties du discours.

IX. Traduisez en français :

A man's first care should be to avoid the reproaches of his own heart ; his next, to escape the censures of the world ; if the last interferes with the former, it ought to be entirely neglected ; but otherwise, there cannot be a greater satisfaction to an honest mind than to see those approbations which it gives itself, seconded by the applauses of the public : a man is more sure of his conduct when the verdict which he passes upon his own behaviour is thus warranted and confirmed by the opinion of all who know him.

Sokrates und der Jüngling.

Ein Jüngling war auf seine Schönheit stolz.
Den führte Sokrates zu Phöbus' Tempel,
Wo dieser schöne Gott in Marmor stand.
„Was spräche der, wofern er sprechen könnte
„Mit Wahrheit von sich selber?“ fragt' er ihn.
Der Jüngling gab zur Antwort: „Dieser spräche
„Mit Wahrheit von sich selber: Ich bin schön,“
„Warum,“ erwiederte der weise Grieche
„Stolzirst du denn mit Gaben eines Steins?
„Willst du nicht höher, als ein Stein, dich schätzen?“

.....Zum Zeichen, daß er von dem Wirth selbst geschickt werde, sollte er ihr den gestickten Beutel zeigen. Diese List gelang; die Frau schickte augenblicklich den Beutel mit Gold, welchen der Kaufmann ihrem Manne wirklich in Verwahrung gegeben hatte. Nun trat Rudolph wieder in den Gerichtssaal, und fragte den Wirth, ob er noch bei seiner Aussage bleibe? Dieser betheuerte die Wahrheit gesprochen zu haben. Da legte Rudolph den Beutel des Kaufmanns auf den Tisch und fragte Beide, ob sie ihn kannten? Der Wirth erblaste; der Kaiser aber warf ihm sein Geschenk vor die Füße, und verurtheilte ihn zum Tode.

(A) Πρῶτον μὲν τοῖνυν, οὐ πρῶτον ἡ φύσις ἡμῶν ἐδείχθη, εἰὰ τῆς πόλεως τῆς ἡμετέρας ἐπορίσθη· καὶ γὰρ εἰ μνῳδὸς ὁ λόγος γέγονεν, ὅμως αὐτῷ καὶ νῦν ῥηθῆναι προσήκει. Δήμητρος γὰρ ἀφικομένης εἰς τὴν χώραν, ὅτ' ἐπλανήθη τῆς Κόρης ἀρπασθείσης, καὶ πρὸς τοὺς προγόνους ἡμῶν εἰμνῶς εἰατεθείσης ἐκ τῶν εὐεργεσιῶν, ἃς οὐχ οἶόν τ' ἄλλοις ἢ τοῖς μεμνημένοις ἀκοῦειν, καὶ εὐσεβείας ἐωρεᾶς διττᾶς, αἵπερ μέγιστα τυγχάνουσιν οὔσαι, τοῖς τε καρποῖς, οἱ τοῦ μὴ θηριωδῶς ζῆν ἡμᾶς αἰτιοὶ γέγονασιν, καὶ τὴν τελευτὴν, ἧς οἱ μετασχόντες περὶ τε τῆς τοῦ βίου τελευτῆς καὶ τοῦ σύμπαντος αἰῶνος ἡδίου τῆς ἐλπίδας ἔχουσιν, οὕτως ἡ πόλις ἡμῶν οὐ μόνον θεοφιλῶς ἀλλὰ καὶ φιλανθρώπως ἔσχεν, ὥστε κυρία γενομένη τοσοῦτων ἀγαθῶν οὐκ ἐφθόνησε τοῖς ἄλλοις, ἀλλ' ὥν ἐλαβεν ἅπασιν μετέδωκεν. καὶ τὰ μὲν ἐτι καὶ νῦν καθ' ἕκαστον τὸν ἐνιαντὸν δέικνυμεν, τῶν δὲ συλλήβδην τὰς τε χρείας καὶ τὰς ἐργασίας καὶ τὰς ὠφελείας τὰς ἀπ' αὐτῶν γεγνομένας ἐδίδαξεν. καὶ τοῖς τοῖς ἀπιστεῖν μικρῶν ἐτι προστεθέντων οὐδεὶς ἂν ἀξιώσειεν.

(B) Καίτοι πῶς ἂν ἐκείνων ἄνδρες ἀμείνους ἢ μᾶλλον φιλέλληνες ὄντες ἐπιδειχθεῖεν, οἵτινες ἐτλησαν ἐπιδεῖν ὥστε μὴ τοῖς λοιποῖς αἰτιοὶ γενέσθαι τῆς δουλείας, ἐρήμην μὲν τὴν πόλιν γενομένην, τὴν δὲ χώραν πορθουμένην, ἱερὰ δὲ συλῶμεν καὶ νεῶς ἐμπεπραμένους, ἅπαντα δὲ τὸν πόλεμον περὶ τὴν πατρίδα τὴν αὐτῶν γιγνόμενον; καὶ μὴδὲ ταῦτ' ἀπέχρησεν αὐτοῖς, ἀλλὰ πρὸς χιλίας καὶ διακοσίας τριῆρεις μόνου διανασμαχεῖν ἐμελέτησαν. οὐ μὴν εἰάθησαν κατασχινθέντες γὰρ Πελοποννήσιον τὴν ἀρετὴν αὐτῶν, καὶ νομίσαντες προδιαφθαρέντων μὲν τῶν ἡμετέρων οὐδ' αὐτοὶ σωθῆσθαι, κατορθωσάντων δ' εἰς ἀτιμίαν τὰς αὐτῶν πόλεις καταστήσειν, ἠναγκάσθησαν μετασχεῖν τῶν κινδύνων. καὶ τοὺς μὲν θορήβους τοὺς ἐν τῷ πράγματι γενομένους καὶ τὰς κραυγὰς καὶ τὰς παρακελεύσεις, ἃ κοινὰ πάντων ἐστὶ τῶν ναυμαχούντων, οὐκ οἶδ' ὅ τι δεῖ λέγοντα εἰπαρῖβειν· ἃ δ' ἐστὶν ἴδια καὶ τῆς ἡγεμονίας ἄξια καὶ τοῖς προειρημένοις ὁμολογούμενα, ταῦτα δ' ἐμὸν ἔργον ἐστὶν εἰπεῖν.

(C) Ἐχῶ δὲ καὶ περὶ τῶν πολιτῶν τῶν ἡμετέρων τοιαῦτα εἰελεῖν. καὶ γὰρ οὗτοι πρὸς μὲν τοῖς ἄλλοις, ὅσοις πεπολεμήκασιν, ἅμα διαλλάττονται καὶ τῆς ἐχθρῆς τῆς γεγενημένης ἐπιλανθάνονται, τοῖς δ' ἡπειρώταις οὐδ' ὅταν εὖ πάσχωσι χάριν ἰσασιν· οὕτως ἀείνηστον τὴν ὀργὴν πρὸς αὐτοὺς ἔχουσιν. καὶ πολλῶν μὲν οἱ πατέρες ἡμῶν μηδισμοῦ θάνατον κατέγνωσαν, ἐν δὲ τοῖς συλλόγοις ἐτι καὶ νῦν ἀρὰς ποιοῦνται, πρὶν ἄλλο τι χρηματίζειν, εἰ τις ἐπικηρκεῖται Πέρσας τῶν πολιτῶν. Εἰμολπίδαι δὲ καὶ Κήρυκες ἐν τῇ τελευτῇ τῶν μυστηρίων διὰ τὸ τοῦτων μῖσος καὶ τοῖς ἄλλοις βυρβύροις εἰργεσθαι τῶν ἱερῶν ὥσπερ τοῖς ἀνδροφόνους προαγαγέουσιν. οὕτω δὲ φύσει πολεμικῶς πρὸς αὐτοὺς ἔχομεν, ὥστε καὶ τῶν μέντοι ἰδίᾳ συνδιατρίβωμεν τοῖς Τρωαῖοις καὶ Περσικοῖς, εἰ ὥν ἴσται πυνθάνεσθαι τὰς ἐκείνων συμφορὰς. εἴροι δ' ἂν τις ἐκ μὲν τοῦ πόλεμον τοῦ πρὸς τοῖς βυρβύροις ἔμνον πεποιημένους, ἐκ δὲ τοῦ πρὸς τοῖς Ἕλληνας

θρήνους ἡμῖν γεγεννημένους, καὶ τοὺς μὲν ἐν ταῖς ἑορταῖς ἀδομένους, τοὺς δ' ἐπὶ ταῖς συμφοραῖς ἡμᾶς μεμνημένους.

- (A) Ultima Cumæi venit iam carminis ætas;
Magnus ab integro sæclorum nascitur ordo.
Iam redit et Virgo; redeunt Saturnia regna;
Iam nova progenies cœlo demittitur alto.
Tu modo nascenti puero, quo ferrea primum
Desinet ac toto surget gens aurea mundo,
Casta fave Lucina: tuus iam regnat Apollo.
Teque adeo decus hoc ævi, te Consule, inibit,
Pollio; et incipient magni procedere menses.
Te duce, si qua manent, sceleris vestigia nostri
Irrita perpetua solvent formidine terras.
Ille deum vitam accipiet divisque videbit
Permixtos heroas et ipse videbitur illis,
Pacatumque reget patriis virtutibus orbem.
At tibi prima, puer, nullo munuscula cultu
Errantes ederas passim cum baccare tellus
Mixtaque ridenti colocasia fundet acantho.
Ipsæ lacte domum referent distenta capellæ
Ubera; nec magnos metuent armenta leones.
Ipsa tibi blandos fundent cunabula flores.
Occidet et serpens, et fallax herba veneni
Occidet; Assyrium vulgo nascetur amomum.
- (B) Talibus ex adyto dictis Cumæa Sibylla
Horrendas canit ambages antroque remugit,
Obscuris vera involvens; ea frena furenti
Concutit, et stimulos sub pectore vertit Apollo.
Ut primum cessit furor et rabida ora quierunt,
Incipit Æneas heros: Non ulla laborum,
O virgo, nova mi facies inopinave surgit;
Omnia præcepi, atque animo mecum ante peregi.
Unum oro: Quando hic inferni ianua regis
Dicitur et tenebrosa palus Acheronte refuso,
Ire ad conspectum cari genitoris et ora
Contingat; doceas iter et sacra ostia pandas.
Illum ego per flammās et mille sequentia tela
Eripui his humeris, medioque ex hoste recepi;
Ille meum comitatus iter maria omnia mecum
Atque omnes pelagique minas cœlique ferebat,
Invalidus, viris ultra sortemque senectæ.
Quin, ut te supplex peterem, et tua limina adirem,
Idem orans mandata dabat. Gnatique patrisque,

Alma, precor, miserere; potes namque omnia, nec te
 Nequidquam lucis Hecate præfecit Avernīs.
 Si potuit Manes arcessere coniugis Orpheus,
 Threïcia fretus cithara fidibusque canoris;
 Si fratrem Pollux alterna morte redemit,
 Itque reditque viam toties. Quid Thesea magnum,
 Quid memorem Alciden? Et mi genus ab Iove summo.

- (C) Vis et Tarquinius reges, animamque superbam
 Ultoris Bruti, fascesque videre receptos?
 Consulis imperium hic primus sævasque secures
 Accipiet, natosque pater, nova bella moventes,
 Ad pœnam pulchra pro libertate vocabit,
 Infelix! Utcunque ferent ea facta minores,
 Vincet amor patriæ laudumque immensa cupido.
 Quin Decios, Drususque procul, sævumque securi
 Adspice Torquatum, et referentem signa Camillum.
 Illæ autem, paribus quas fulgere cernis in armis,
 Concordes animæ nunc et dum nocte prementur,
 Heu quantum inter se bellum, si lumina vitæ
 Attigerint, quantas acies stragemque ciebunt,
 Aggeribus socer Alpinis atque arce Monæci
 Descendens, gener adversis instructus Eois!
 Ne, pueri, ne tanta animis adsuescite bella,
 Neu patriæ validas in viscera vertite viris.
 Tuque prior, tu parce, genus qui ducis Olympo,
 Proiice tela manu, sanguis meus.
 Ille triumphata Capitolia ad alta Corintho
 Victor aget currum, cæsis insignis Achivis.

LATIN.—CICERO.—DE IMPERIO CN. POMPEII.

Examiner..... REV. GEORGE CORNISH, M.A.

(A) Et quoniam semper appetentes gloriæ præter cæteras gentes atque avidi laudis fuistis, delenda est vobis illa macula Mithridatico bello superiore concepta, quæ penitus iam insedit ac nimis inveteravit in populi Romani nomine, quod is, qui uno die, tota in Asia, tot in civitatibus, uno nuncio atque una significatione litterarum cives Romanos necandos trucidandosque denotavit, non modo adhuc poenam nullam suo dignam scelere suscepit, sed ab illo tempore annum iam tertium et vicesimum regnat et ita regnat, ut se non Ponti neque Cappadociae latebris occultare velit, sed emergere ex patrio regno atque in vestris vectigalibus, hoc est, in Asiae luce versari. Etenim adhuc ita nostri cum illo rege contenderunt imperatores, ut ab illo insignia victoriae, non victoriam reportarent. Triumphavit L. Sulla, triumphavit L. Murena de Mithridate, duo fortissimi viri et summi imperatores, sed ita triumpharunt, ut illo pulsus superatusque regnaret. Verum tamen illis imperatoribus laus est tribuenda quod egerunt, venia danda quod reliquerunt, propterea quod ab eo bello Sullam in Italiam res publica, Murenæ Sulla revocavit.

(B) Reliquum est ut de felicitate, quam præstare de se ipso nemo potest, meminisse et commemorare de altero possumus, sicut æquum est homines de potestate deorum, timide et pauca dicamus. Ego enim sic existimo: Maximo, Marcello, Scipioni, Mario, et cæteris magnis imperatoribus non solum propter virtutem, sed etiam propter fortunam saepius imperia mandata atque exercitus esse commissos. Fuit enim profecto quibusdam summis viris quaedam ad amplitudinem et ad gloriam et ad res magnas bene gerendas divinitus adiuncta fortuna. De huius autem hominis felicitate, de quo nunc agimus, hac utar moderatione dicendi, non ut in illius potestate fortunam positam esse dicam, sed ut præterita meminisse, reliqua sperare videamur, ne aut invisæ dis immortalibus oratio nostra aut ingrata esse videatur. Itaque non sum prædicaturus quantas ille res domi militiae, terra marique, quantaque felicitate gesserit, ut eius semper voluntatibus non modo cives adsenserint, socii obtemperarint, hostes obdierint, sed etiam venti tempestatesque obsecundarint: hoc brevissime dicam, neminem umquam tam impudentem fuisse, qui ab dis immortalibus tot et tantas res tacitus auderet optare, quot et quantas di immortales ad Cn. Pompeium detulerunt. Quod ut illi proprium ac perpetuum sit, Quirites, quum communis salutis atque imperii tum ipsius hominis causa, sicuti facitis, velle et optare debetis.

(C) Qua re, etiam si quem habetis qui collatis signis exercitus regiones superare posse videatur, tamen nisi erit idem, qui se a pecuniis sociorum, qui ab eorum coniugibus ac liberis, qui ab ornamentis sanorum atque oppidorum, qui ab auro gazaque regia manus, oculos, animum colibere possit, non erit idoneus qui ad bellum Asiaticum regnumque mittatur. Ecquam putatis civitatem pacatam fuisse quæ locuples sit? ecquam esse

locupletem quae istis pacata esse videatur? Ora maritima, Quirites, Cn. Pompeium non solum propter rei militaris gloriam, sed etiam propter animi continentiam requisivit. Videbat enim praetores locupletari quotannis pecunia publica praeter paucos, neque eos quidquam aliud adsequi classium nomine nisi ut detrimentis accipiendis maiore adfici turpitudine videremur.

2 (a) Write a sketch of the public life of Cn. Pompeius. (b) Give an account of the events in Asia and the occurrences at Rome that led to the delivery of this oration. Was the object of its delivery gained? (c) By what other title is the speech known, and for what reason?

3 Write short explanatory notes on the following:—

- (a) Hic locus ad agendum amplissimus.
- (b) Propter dilationem comitiorum.
- (c) Una significatione litterarum.
- (d) Quum publicani familias maximas habent.
- (e) Scimus solutione impedita fidem concidisse.
- (f) Ex senatus consulto legibus solutus ut consul fieret.

4 Translate, and explain the grammatical construction of the following extracts:—

- (a) Omne meum tempus amicorum temporibus transmittendum putavi.
- (b) Nunc quid agendum sit considerate.
- (c) Hunc diffidentem rebus suis confirmavit.
- (d) Quanta innocentia debent esse imperatores.

5 (a) Analyse and parse the following verbs, giving also their principal parts:—*ineunte, laccessitus, districti, pensitant, depressam, prostratos, obedierint, obsolevit, collatis.*

(b) Give (1) the Perf., Sup., and Inf.; (2) the roots; and (3) the cognate forms in the Greek, of the verbs *do* and *abdo*.

6 Give an account of the chief sources whence the revenues of Rome were derived during the time of the Republic, and mention those which Cicero speaks of in this oration. Explain, also, the method of their collection.

7 (a) Decline the following words:—*Alacer, supplex, unus, idem.* (b) Give the Comparative and Superlative of:—*crudelis, facilis, superus, vetus.* (c) Give the force of the suffixes—*ax, —osus, —ilis*, severally.

8 (a) Write down the principal parts of:—*cupio, cumbo, vincio, caedo.*

(b) Inflect the Pres. Subj. Pass. of *juvo*; the Perf. Subj. Act of *cedo*; and the Imp. Subj. of *volo*, and mark the quantity of the *penultimate* of each form.

(c) What classes of verbs take the construction of the Ablative?

(d) State the difference of meaning between the Imperfect and Pluperfect of the Subjunctive in *conditional* sentences.

(A) Dum ea Romani parant consultantque, jam Saguntum summa vi oppugnabatur. Civitas ea longe opulentissima ultra Hiberum fuit, sita passus mille ferme a mari. Oriundi a Zacynthio insula dicuntur, mixtique etiam ab Ardea Rutulorum quidam generis: ceterum in tantas brevi creverant opes seu maritimis seu terrestribus fructibus, seu multitudinis incremento seu disciplinæ sanctitate, qua fidem socialem usque ad perniciem suam coluerunt. Hannibal infesto exercitu ingressus fines pervas-iatis passim agris urbem tripartito adgreditur. Angulus muri erat in planiorem patentioreque, quam cetera circa, vallem vergens: adversus eum vineas agere instituit, per quas aries mœnibus admoveri posset. Sed ut locus procul muro *satis æquus agendis vineis fuit*, ita haudquaquam prospere, postquam ad effectum operis ventum est, cœptis succedebat: et turris ingens imminebat, et murus, ut in suspecto loco, supra ceteræ modum altitudinis emunitus erat, et juvenus delecta, ubi plurimum periculi ac timoris ostendebatur, ibi vi majore obsistebant. Ac primo missilibus submovere hostem nec quicquam satis tutum munientibus pati, deinde jam non pro mœnibus modo atque turri tela micare, sed ad erum-pendum etiam in stationes operaque hostium animus erat, quibus tumultuariis certaminibus haud ferme plures Saguntini cadebant quam Pœni. Ut vero Hannibal ipse, dum murum incautius subit, adversum femur tragula graviter ictus cecidit, tanta circa fuga ac trepidatio fuit, ut non multum abesset, quin opera ac vineæ desererentur.

(B) Tandem nequiquam jumentis atque hominibus fatigatis, castra in jugo posita, ægerrime ad id ipsum loco purgato; tantum nivis fodiendum atque egerendum fuit. Inde ad rupem muniendam, per quam unam via esse poterat, milites ducti, cum cædendum esset saxum, arboribus circa inmanibus dejectis detruncatisque, struem ingentem lignorum faciunt, eamque, *cum et vis venti apta faciendo igni coorta esset*, succendunt, ardentiaque saxa infuso aceto putrefaciunt. Ita torridam incendio rupem ferro pandunt, molliuntque anfractibus modicis cliros, ut non jumenta solum, sed elephantiam etiam deduci possent. Quadriduum circa rupem consumptum, jumentis prope fame absumentis: nuda enim fere cacumina sunt et, si quid est pabuli, obruunt nives: inferiora valles apricos quosdam colles habent, rivosque prope silvas et jam humano cultu digniora loca: ibi jumenta in pabulum missa *et quies muniendo fessis hominibus data triduo*. Inde ad planum descensum, et jam locis mollioribus et accolarum ingeniiis.

(C) Ceterum nemini omnium major justiorque quam ipsi consuli videri: gaudio efferri, qua parte copiarum alter consul victus foret, ea se vicisse: *restitutos ac refectos militibus animos* nec quemquam esse præter collegam qui dilatam dimicationem vellet: eum animo magis quam corpore ægrum memoria vulneris aciem ac tela horrere: sed non esse cum

ægro senescendum: quid enim ultra differri aut teri tempus? quem tertium consulem, quem alium exercitum expectari? castra Carthaginiensium in Italia, ac prope in conspectu urbis esse: non Siciliam ac Sardiniam victis adeptas nec eis Hiberum Hispaniam peti sed solo patrio terraque, in qua geniti forent, pelli Romanos. "Quantum ingemiscant," inquit, "patres nostri circa mœnia Carthaginis bellare soliti, si videant nos, progeniem suam, duos consules consularesque exercitus, in media Italia parentes intra castra, Pœnum, quod inter Alpes Apenninumque agri sit, suæ ditionis fecisse!" hæc adsidens ægro collegæ, hæc in prætorio prope contionabundus agere. Stimulabat et tempus propinquum comitiorum, *ne in novos consules bellum differretur, et occasio in se unum vertendæ gloriæ, dum æger collega erat: itaque, nequiquam dissentiente Cornelio, parari ad propinquum certamen milites jubet.*

In the reign of Ancus Marcius,—an Etruscan, a wealthy, enterprising, and ambitious man, and a son of Demaratus of Corinth, left Tarquinii and proceeded to Rome, and there took up his abode. He hoped that there he would be able to acquire honours and distinction, a thing which he was unable to do at Tarquinii, because he was a foreigner. His father, Demaratus, was a member of the illustrious family of the Bacchiadæ at Corinth; but being obliged by his political enemies to quit his native land, he had settled at Tarquinii in Etruria, where he had friends. He is also said to have been accompanied by celebrated Greek artists, and to have taught the Etruscans the art of alphabetical writing. He married an Etruscan woman, who became the mother of his two sons, Lucumo and Aruns. Aruns died before his father, but Lucumo outlived him, and married an Etruscan woman, by name Tanaquil. This Lucumo, with his wife, went to live at Rome, where, on the death of Ancus Marcius, he was elected as king by the people. He is known in history under the name of Lucius Tarquinius Priscus.

Peter of Russia, when he came to years of manhood, though he found himself emperor of a vast and numerous people, master of an endless territory, absolute commander of the lives and fortunes of his subjects, in the midst of this unbounded power and greatness, turned his thoughts upon himself and people with sorrow. Sordid ignorance and a brute manner of life, this generous prince beheld and contemned, from the light of his own genius. His judgment suggested this to him, and his courage prompted him to amend it. In order to this, he did not send to the nation from whence the rest of the world has borrowed its politeness, but himself left his diadem to learn the true way to glory and honour, and application to useful arts, wherein to employ the laborious, the simple, the honest part of his people. Mechanic employments and operations were very justly the first objects of his favour and observation. With this glorious intention he travelled into foreign nations in an obscure manner, above receiving little honours where he sojourned, but prying into what was of more consequence, their arts of peace and of war. By this means had this great prince laid the foundation of a great and lasting fame, by personal labour, personal knowledge, personal valour.

"Hannibal was seventy-six years of age when he was appointed commander-in-chief of the Carthaginian armies in Spain, upon the sudden death of Hasdrubal. Two years, we have seen, had been employed in expeditions against the native Spaniards; the third year was devoted to the siege of Saguntum. Hannibal's pretext for attacking it was, that the Saguntines had oppressed one of the Spanish tribes in alliance with Carthage; but no caution in the Saguntine government could have avoided a quarrel, which their enemy was determined to provoke. Saguntum, although not a city of native Spaniards, resisted as obstinately as if the very air of Spain had breathed into foreign settlers on its soil the spirit so often, in many different ages, displayed by the Spanish people. Saguntum was defended like Numantia and Gerona: the siege lasted eight months; and when all hope was gone, several of the chiefs kindled a fire in the market-place, and after having thrown in their most precious effects, leapt into it themselves, and perished. Still the spoil found in the place was very considerable: there was a large treasure of money, which Hannibal kept for his war expenses; there were numerous captives, whom he distributed amongst his soldiers as their share of the plunder; and there was much costly furniture from the public and private buildings, which he sent home to decorate the temples and palaces of Carthage."

(A) Valerian was about sixty years of age when he was invested with the purple, not by the caprice of the populace, or the clamours of the army, but by the unanimous voice of the Roman world. In this gradual ascent through the honours of the state, he had deserved the favours of virtuous princes, and had declared himself the enemy of tyrants. His noble birth, his mild but unblemished manners, his learning, prudence, and experience were revered by the senate and people; and if mankind (according to the observation of an ancient writer) had been at liberty to choose a master, their choice would, most assuredly, have fallen on Valerian. Perhaps the merit of this emperor was inadequate to his reputation; perhaps his abilities, or at least his spirit, were affected by the languor and coldness of old age. The consciousness of his decline engaged him to share the throne with a younger and more active associate: the emergency of the times demanded a general no less than a prince; and the experience of the Roman censor might have directed him where to bestow the imperial purple, as the reward of military merit. But instead of making a judicious choice, which would have confirmed his reign and endeared his memory, Valerian, consulting only the dictates of affection or vanity, immediately invested with the supreme honours his son Gallienus, a youth whose effeminate vice had been hitherto concealed by the obscurity of a private station. The joint government of the father and the son subsisted about seven, and the sole administration of Gallienus continued about eight years. But the whole period was one uninterrupted series of confusion and calamity.

(B) As the power of acquiring knowledge is to be ascribed to reason, so the attainment of it mightily strengthens and improves it, and thereby enables it to enrich itself with further acquisitions. Knowledge, in general, expands the mind, exalts the faculties, refines the taste of pleasure, and opens numerous sources of intellectual enjoyment. By means of it we become less dependent for satisfaction upon the pleasures of sense, and we are made to feel the superiority of the spiritual to the material part of our nature. Instead of being continually solicited by the influence and irritation of sensible objects, the mind can retire within herself, and expatiate in the cool and quiet walks of contemplation. The Author of nature has wisely annexed a pleasure to the exercise of our active powers, and particularly to the pursuit of truth, which, if it be in some instances less intense, is far more durable than the gratifications of sense, and is on that account incomparably more valuable.

(A) The next summer, Alcibiades sailed to Argos with twenty ships, and seized three hundred men, who were still thought to be suspicious characters, and to favour the cause of the Lacedæmonians; and these the Athenians deposited in the neighbouring islands within their dominions. The Athenians also undertook an expedition against the island of Melos, with thirty ships of their own, six of the Chians, two of the Lesbians, sixteen hundred of their own heavy-armed, three hundred bowmen, twenty mounted archers, and about five thousand five hundred heavy-armed of the allies and the islanders. Now the Melians are a colony of the Lacedæmonians, and would not submit to the Athenians, like the rest of the islanders, but at first remained quiet as neutrals, and then, when the Athenians tried to compel them by devastating their land, went openly to war with them. The generals, therefore, Cleomedes, son of Lycomedes, and Tisias, son of Tisimachus, having gone and encamped in their territory with this armament, before injuring any part of the land, first sent ambassadors to hold a conference with them. These the Melians did not introduce to their popular assembly, but desired them to state the objects of their mission before the magistrates and the few.

(B) The Spartans, though they acted with the spirit which I am here speaking of, carried it much further than what I propose. Among them it was not lawful for the father himself to bring up his children after his own fancy. As soon as they were seven years old, they were all listed in several companies, and disciplined by the public. The old men were spectators of their performances, who often raised quarrels among them, and set them at strife with one another, that by those early discoveries they might see how their several talents lay, and without any regard to their quality, disposed of them accordingly, for the service of the commonwealth. By this means, Sparta soon became the mistress of Greece, and famous through the whole word for her civil and military discipline.

EUCLID—ARITHMETIC.

Examiner.....ALEXANDER JOHNSON, LL.D.

1. The angles at the base of an isosceles triangle are equal, and if the equal sides be produced, the angles below the base are also equal.
 - a. If two isosceles triangles be on the same base, but on opposite sides of it, the line joining their vertices will bisect the common base and be perpendicular to it.
2. Parallelograms on equal bases and between the same parallels are equal.
 - a. What is the generalization of this in Book VI?
3. On a given right line construct a square.
4. If a right line be bisected and produced, the sum of the squares of the whole line thus produced and of the produced part is equal to twice the square of half the line, together with twice the square of the line made up of the half and produced part.
5. Two circles cannot touch one another in more than one point.
6. If a tangent be drawn to a circle and from the point of contact a line be drawn cutting the circle, the angle between this line and the tangent is equal to the angle in the alternate segment of the circle.
 - a. If two circles touch one another externally, any line drawn through the point of contact across the circles will cut them so that a segment in one is similar to the alternate segment in the other.
7. If four right lines be proportional, the rectangle under the extremes is equal to the rectangle under the means.
8. In equal circles angles whether at the centre or circumference are in the same ratio as the arcs on which they stand.
9. Find the least common multiple of 7, 21, 108, 125, 180.
10. The area of a circle (radius = r) is πr^2 and the volume of a cylinder with circular base is equal to the area of the base multiplied by the height. Hence find the height of a cylindrical jar which will contain exactly a gallon (10 lbs.) of water, if the diameter of the base of the jar be 8 inches, and the weight of one cubic inch of water be 252.5 grains.
11. British standard silver contains 37 parts in 40 of fine silver, and 1 lb. Troy of standard silver is coined into 66 shillings. Calculate the value of the money which can be coined from 100 lbs. avoirdupois of fine silver.
12. The moon revolves in her orbit round the earth in 27 days, 7 hrs., 43 min., 11 secs. Through how many degrees of her orbit does she move in 7 days?
13. If one steamer sail 3000 miles in 11 days, how far will another sail in 5 days, if she can sail 8 miles for the former's 7?
14. The population of London in 1801 was 864,845, and in 1841 1,690,084. Calculate the rate per cent. of the increase in 40 years.

TRIGONOMETRY—ALGEBRA.

ExaminerALEXANDER JOHNSON, LL.D.

1. Two straight lines are drawn intersecting at an angle of $1''$; find approximately how far they must be produced before they will be one inch apart.

2. Prove that $\sin A = \frac{\tan A}{\sqrt{1 + \tan^2 A}}$; and hence find value of the sine of the angle whose tangent is $\frac{3}{4}$.

3. Prove $\sin A + \sin B = 2 \sin \frac{1}{2}(A + B) \cos \frac{1}{2}(A - B)$
 $\cos 2A = 2 \cos^2 A - 1$.

4. The area of a triangle $= \sqrt{s(s-a)(s-b)(s-c)}$.

5. Being given the distances of three points in a horizontal plane, show how to find their distances from a fourth point in the same plane.

6. In any triangle given $b = 30.8$, $a = 62.73$, $A = 107^\circ 3' 13''$; find c .

7. From a ship at sea it is found that the angle which a flagstaff on the top of a cliff subtends is $38'$; the elevation of the cliff is 14° ; calculate the ship's distance from the cliff, and also the height of the cliff, if that of the flagstaff is 24 feet.

8. At what distance on the earth's surface should two mountains, 3 miles and 2 miles high respectively, be placed in order that the summit of each should be just visible from the summit of the other?

9. Divide $1 + x^3 - 8y^3 + 6xy$ by $1 + x - 2y$.

10. Solve the equations

$$(m+n)(m-x) = m(n-x);$$

$$\frac{11}{12x-11} + \frac{5}{6x+5} = \frac{7}{4x+7};$$

$$x + \sqrt{a^2 + x^2} = \frac{na^2}{\sqrt{a^2 + x^2}};$$

$$\frac{x}{a} - \frac{y}{b} = m, \frac{x}{c} + \frac{y}{d} = n.$$

11. Find the value of x in $ax^2 + bx + c = 0$.

12. Find the least common multiple of $6(x^2 + xy)$, $8(xy - y^2)$ and $10(x^2 - y^2)$.

13. Find the value of

$$\left(\frac{x^4 - b^4}{x^2 - 2bx + b^2} \div \frac{x^2 + bx}{x - b} \right) \times \frac{x^3 - b^2x^3}{x^4 + b^4}$$

14. If $\frac{a}{b} = \frac{c}{d} = \frac{e}{f}$ prove $\frac{a^n}{b^n} = \frac{ma^n + nc^n + pe^n}{mb^n + nd^n + pf^n}$.

15. There are two bars of metal, the first containing 14 oz. of silver and 6 of tin, the second containing 8 of silver, and 12 of tin; how much must be taken from each to form a bar of 20 oz., containing equal weights of silver and tin?

16. Prove that a surd cannot equal the sum or difference of a rational quantity and a surd, or of two dissimilar surds.

SESSIONAL EXAMINATIONS, 1866.

FRIDAY, APRIL 6TH.—9 A.M. TO 1 P.M.

THIRD YEAR—*Ordinary Examination.*

ASTRONOMY—OPTICS.

Examiner,.....ALEXANDER JOHNSON, LL.D.

1. How is the time of rotation of the Earth on its axis ascertained? Why is this different from the length of the ordinary day?

2. Describe a method for finding mean local time.

3. Define a Lunar month, and a Synodic month. State how much of the Moon's surface will appear to us illuminated when she is in Conjunction, Quadrature, and Opposition respectively, and explain the cause fully.

4. Find the angle subtended at the Earth by a section of her shadow made at the distance of the Moon.

5. Explain with the aid of diagrams the variations of the lengths of day and night throughout the year at the equator, the pole, lat. $66^{\circ} 32'$ North, and latitudes greater or less than $66^{\circ} 32'$ North.

6. Find the periodic time of Mercury.

7. Find the distance of Mercury from the Sun by means of his greatest elongation.

8. Define the Right Ascension and Declination of a Star; its Latitude, Longitude, Altitude, Azimuth, Zenith Distance, and North Polar distance. Define the Latitude and Longitude of a place on the Earth, Terrestrial Meridian, Horizon, Zenith, Nadir.

9. Define and find the principal focus of a concave Spherical Mirror.

10. The index of refraction for water being $\frac{4}{3}$; show that the distance (D) from the surface of a luminous point in water and the distance (d) of its image are connected by the relation $d = \frac{3}{4}D$.

11. What is meant by the Total Reflexion of Light? Describe an experiment illustrating it.

12. Find the principal focus of a plano-concave lens.

13. Describe Newton's experiments on the dispersion of light.

14. Describe the eye as an optical instrument.

15. Explain the causes of long and short sight respectively, and the manner in which these defects are remedied by spectacles.

a. Find the focal length of the spectacles that should be used by a man who can read a book at the distance of $5\frac{1}{2}$ inches and who wishes to read it at the distance of 10 inches. What kind of spectacles should he use?

16. Describe the Astronomical Telescope, and find its magnifying power.

SESSIONAL EXAMINATION, 1866.

MONDAY, APRIL 9; 9 A.M. TO 1 P.M.

MECHANICS—HYDROSTATICS.

THIRD YEAR.—ORDINARY EXAMINATION.

Examiner.....ALEXANDER JOHNSON, LL.D.

1. Find the centre of gravity of a homogeneous thin plate in the form of a triangle.

2. If the Power and Resistance in a straight lever of the First Order be 17 lbs. and 32 lbs. respectively, and make with each other an angle of 79° , find the strain on the fulcrum.

3. Describe the first kind of Burton Pulley, and find the ratio of the Power to the Resistance.

4. If a force equal to 4 lbs. produce in one second a velocity of .546 feet in a given body; find the quantity of matter contained in the body.

5. Prove the following approximate rule:—

The height of any place in feet is equal to the square of the number of quarter seconds occupied by a body in falling from the top to the bottom.

6. If a body be projected vertically upwards *in vacuo* with a given velocity, prove that it will have the same velocity on its return to the point from which it started.

7. Find the velocity acquired by a railway train in running down a gradient of 2164 ft., having a total fall of 31 feet; the force of gravity being 32.19 and the resistance from friction and the air being estimated at 7 lbs. per ton (of 2240 lbs.).

8. Find the time of oscillation of the simple pendulum.

9. Supposing the Earth's attraction to vary inversely as the square of the distance, find what it becomes at the distance of the Moon, g being 32.2 ft.; and compare this result with the centrifugal force of the Moon in her orbit (supposed circular), the Moon's distance being 59.964 radii of the Earth, the Earth's diameter 7926 miles, and the Periodic Time of the Moon, 27d. 7h. 43m. 11s.

10. If a surface of one square inch be placed in a vessel completely filled with water, and if the pressure on it be 2 lbs. what will be the pressure on one square inch placed at a level 75 inches lower?

11. Describe an experimental method of exhibiting the truth of Boyle and Mariotte's Law, mentioning any precautions that may be necessary in the experiment.

12. State and prove the principle of Archimedes for floating bodies.

13. Describe the method of finding specific gravities by the Hydrotatic Balance, (1) for bodies heavier than water, (2) for bodies lighter than water.

a. What is the method for bodies that dissolve in water?

14. If 100 cubic inches of a gas whose pressure is 29.5 be mixed with 150 cubic inches of another gas at the same temperature, whose pressure is 13.2, calculate the pressure of the mixture if it occupy a volume of 300 cubic inches.

15. Describe the principle of the siphon, and find the magnitude of the force which causes the liquid to descend from one vessel to another.

MCGILL COLLEGE, MONTREAL.

B. A. ORDINARY EXAMINATION, 1866.

FRIDAY, APRIL 6TH: 9 A.M. TO 1 P.M.

ASTRONOMY—OPTICS.

Examiner,.....ALEXANDER JOHNSON, LL.D.

1. State Kepler's Laws, explaining them fully. Give the method for proving the first law.
2. How is the time of revolution of the Earth in its orbit ascertained? What is the cause of the difference between this period and the length of a year?
3. Explain the connection between the phenomena of the seasons and the annual revolution of the Earth.
4. Give the method for finding the length of the Earth's shadow.
5. In April, 1853, the greatest and least semi-diameters of the moon were $16' 43''.1$ and $14' 45''.2$ respectively, find the eccentricity of the lunar orbit.
6. Draw a diagram of such a portion of the apparent path of Venus in the sky during a definite time as will illustrate what is meant by saying, that the planet is stationary, or that its motion is direct or retrograde. Explain the appearances.
7. Give an account of the method of finding the distance of Jupiter from the sun.
8. Give an account of the manner in which Neptune was discovered.
9. The focal length of a concave spherical mirror is a mean proportional between the distances of the conjugate foci from the principal focus.
10. State the laws of refraction of light and describe the experimental proof.
11. Show that concave lenses tend to cause a divergence of rays falling on them, and convex lenses a convergence.
12. Give a construction for the path of a ray passing through a thin lens.
13. An object 5 inches in diameter is placed at a distance of 14 inches from a convex lens of 7 inches focal length; find position and magnitude of image.
14. Find the dispersion produced by a convex lens of crown glass of 1 inch aperture and 3 feet focal length, the dispersive power of crown glass being 0.036.
15. Explain the effects of the magic lantern.
16. Describe the Gregorian Telescope, and find its magnifying power.

B. A. ORDINARY EXAMINATION, 1866.

MONDAY, APRIL 9TH, 9 A.M. TO 1 P.M.

MECHANICS—HYDROSTATICS.

ExaminerALEXANDER JOHNSON, LL.D.

1. The moment of the resultant of any number of parallel forces, with respect to a plane, is equal to the sum of the moments of the component forces with respect to that plane.

2. Describe the Roman steelyard, and show how it should be graduated.

3. If the force required to draw a train of carriages on a level railroad be $\frac{1}{100}$ th of the load, find the force required to ascend a gradient of 1 in 60. (Prove any theorem respecting the inclined plane you may employ.)

4. State the principle of constancy of work done, and apply it to determine the ratio of the power to the vertical resistance in the screw.

5. Assuming the earth's equatorial radius to be 20,923,596 feet, the number of seconds in a sidereal day to be 86,164, and $g = 32.088$ feet, prove that the following relation holds between the centrifugal force at the equator (f), and the attraction of the earth uninfluenced by rotation (G)

$$f = \frac{G}{289.40}$$

6. The length of a seconds pendulum in London is 39.139 inches; calculate the dynamical force of gravity.

7. Describe Coulomb's experiments on Friction, and state the Laws that he obtained.

8. A stone is projected vertically upwards with a velocity of 150 feet per second, and one second after, another stone is projected with a velocity of 200 feet per second; where will they meet?

9. If a heavy body be projected *in vacuo* with a given velocity, the maximum range on a horizontal plane corresponds to an elevation of 45° .

10. If the pressure on a square inch of surface placed in a vessel of mercury (sp. gr. = 13.5) be 1000 grains, calculate the pressure on a circular surface of $\frac{1}{4}$ of an inch radius, placed 9 inches lower down.

11. How much of its weight will 1 cwt. of cast iron (sp. gr. = 7.25) lose if immersed in water?

12. Define the specific gravity of a gas or vapour. Find the volume of 500 grains of oxygen at the temperature of 100° , and under the pressure 30.56 inches (sp. gr. = 1.106).

13. Describe the siphon manometer and the mode of graduating the scale.

14. A ship on sailing into a river sinks 2 inches, and after discharging 12000 lbs. of her cargo rises 1 inch; determine the weight of the ship and cargo, the sp. gr. of sea-water being 1026.

15. There is a pump lifting water 29 feet high; the diameter of its piston is 1 foot; the play of piston 3 feet; and the pump makes 10 strokes per minute. How many gallons of water will be discharged per minute; and what is pressure on piston?

EXPERIMENTAL PHYSICS.

B. A. AND THIRD YEAR EXAMINATION, 1366.

MONDAY, APRIL 9TH, 2½ TO 4½ P.M.

LIGHT—HEAT.

Examiner.....ALEXANDER JOHNSON, LL.D.

1. Account for the laws of refraction on the principles of the wave-theory of Light.
2. What is double refraction? Define the optic axis of a double refracting crystal: define also uni-axal and bi-axal crystals. Explain the phenomena of double refraction according to the wave-theory.
3. Describe the manner in which the phenomena of thin plates are exhibited by Read's Iroscope, and explain them.
4. State the physical property from which polarized light has been so called. Explain the phenomena of polarized light on the wave theory. Describe the different methods of polarizing light.
5. Describe the construction of a Nicol's prism, and explain its action.
6. Describe any polariscope with which you are acquainted, and the manner of using it.
7. Describe Sir John Leslie's experiments on the radiation, reflection and absorption of heat, and give some of the results.
8. Describe the *cryophorus*, and explain its action.
9. Show that the number of units of work accumulated in a body of mass (m) moving with a velocity (v) is $\frac{1}{2} m v^2$, and hence with the aid of the mechanical equivalent of heat calculate the amount of heat developed by the stoppage of a ball weighing 100 lbs., and having a velocity of 1000 feet per second.
 - a. If the ball were of iron (sp. heat = .114) and all the heat developed were concentrated in it, find how much its temperature would be raised.
10. Calculate the number of cubic feet of air that would be raised 1° in temperature by the freezing of 1 cubic foot of water at 32° Fah., assuming the weight of a cubic foot of air to be 1.29 oz., and of a cubic foot of water 62½ lbs., the sp. heat of air being 0.24.
11. Describe the process that takes place when water boils in an exhausted receiver at a temperature lower than 212° .
12. If a thermometer be placed in the receiver of an air pump, state the nature of the change in the temperature marked, when the pump is worked, and explain it.

ALGEBRA—TRIGONOMETRY.

SECOND YEAR. *Honour Examination.*

Examiner..... ALEXANDER JOHNSON, LL.D.

1. Apply Sturm's theorem to the following equation, to find the number of real roots and the consecutive integer numbers between which they respectively lie,

$$x^4 - 8x^3 + 14x^2 + 4x - 8 = 0.$$

2. Calculate to five decimal places, the root of the previous equation which lies between 2 and 3.

3. Find all the roots of the equation

$$x^5 - 11x^4 + 17x^3 + 17x^2 - 11x + 1 = 0.$$

4. Show that the irreducible case of Cardan's solution of a cubic equation may be solved by the help of a table of sines and cosines.

5. Prove that if we have an equation $f(x) = 0$ and we equate to zero the first derived function of $f(x)$, then the real roots of this new equation [$f'(x) = 0$] will separate the real roots of the given equation.

6. Change the equation $x^4 - 12x^3 + 15x^2 + 196x - 480 = 0$ into another wanting the second term.

7. In any function of x

$$Ax^n + Bx^{n-1} + Cx^{n-2} + \&c. + Px + Q,$$

whose coefficients are all real and finite, it is always possible to assign to x a value which will make the first term numerically greater than the sum of all the terms which follow.

8. Prove that all the roots of $x^n - 1 = 0$ are given by the expression

$$\cos. \frac{2k\pi}{n} \pm \sin. \frac{2k\pi}{n} \sqrt{-1}.$$

where k may be any integer.

a. Show that this trigonometrical expression can never have more than n values.

9. Prove Demoiivre's theorem for a negative index.

$$10. \text{ Prove } \sin. a = a - \frac{a^3}{1.2.3} + \frac{a^5}{1.2.3.4.5} + \&c.$$

11. In a spherical triangle

$$\sin. \frac{1}{2} A = \sqrt{\frac{\sin. (s-b) \sin. (s-c)}{\sin. b \sin. c}}$$

12. The area of a spherical triangle is proportional to the excess of the sum of the three angles above two right angles.

a. If the spherical excess be $3^{\circ} 30'$, find the area of the triangle on the surface of the earth (assuming the radius as 4000 miles.)

13. The angles of a spherical triangle are $A = 114^{\circ} 30'$, $B = 83^{\circ} 12'$, $C = 123^{\circ} 20'$, find the side a .

14. If the sides of a spherical triangle (ABC) be cut by a transversal great circle in points a, b, c , then

$$\sin. Ac \sin. Ba \sin. Cb = \sin. aC \sin. bA \sin. cB.$$

15. Prove $\log. u = 2 \left\{ \frac{u-1}{u+1} + \frac{1}{3} \left(\frac{u-1}{u+1} \right)^3 + \frac{1}{5} \left(\frac{u-1}{u+1} \right)^5 + \&c. \right\}$

ANALYTIC GEOMETRY—CALCULUS.

SECOND YEAR.—*Honour Examination.*

Examiner.....ALEXANDER JOHNSON, LL.D.

1. Find the equation of the *evolute* of the ellipse.
2. If $a = 0$, $\beta = 0$, $\gamma = 0$ be the equations of the sides of a triangle whose angles are A , B , C , prove that the equation of the circumscribing circle is $\beta \gamma \sin. A + \gamma a \sin. B + a \beta \sin. C = 0$.
 a . Show, from the equation of the circle circumscribing the triangle formed by three tangents to a parabola, that it passes through the focus.
3. The parameter of the parabola $(ax + by)^2 + Dx + Ey + F = 0$ is $p = \frac{aE - bD}{(a^2 + b^2)^{\frac{3}{2}}}$.
4. Find the locus of the intersection of tangents to an ellipse which cut at right angles.
5. The length of the perpendicular from the centre on the tangent to an ellipse is $p = \frac{ab}{b'}$.
6. If two diameters of a conic section be such that one of them bisects all chords parallel to the other, then conversely, the second will bisect all chords parallel to the first.
7. Given any two points A and B , and their polars with respect to a circle whose centre is O ; let fall a perpendicular AP from A on the polar of B , and a perpendicular BQ from B on the polar of A ; then $\frac{OA}{AP} = \frac{OB}{BQ}$.
8. Find the equation of the tangent to the circle whose equation referred to any axes is $Ax^2 + Bxy + Ay^2 + Dx + Ey + F = 0$ where $B = 2A \cos. \omega$.
9. Given two fixed lines, OA and OB , if any line be drawn to intersect them parallel to a third fixed line, OC , find the locus of the point where AB is cut in a given ratio.
10. Find the equation of a right line passing through a given point and perpendicular to a given line.
11. State and prove the theorem for the evaluation of vanishing fractions.

a. Apply it to the fraction $\frac{(2a^3x - x^4)^{\frac{1}{2}} - a(a^2x)^{\frac{1}{2}}}{a - (ax^3)^{\frac{1}{2}}}$ when $x = a$.

12. Divide the number a into two parts such that the product of the m th power of the one by the n th power of the other shall be a maximum.

13. Prove MacLaurin's theorem, and apply it to the expansion of $\cos. x$ in a series of powers of x .

14. Find the integrals

$$\int_x \frac{\sin x}{a + b \cos. x} ; \int_x \frac{1}{1 + x + x^2} ; \int_x x^n \log. x ; \int_x \frac{2x + 3}{x^3 + x^2 - 2x} ; \int_x \frac{x^2}{(2ax - x^2)^{\frac{1}{2}}}$$

15. Differentiate $e^{ax}(\sin. rx)^m$; x^x ; $x \log. x$.

16. If $u = e^{ax} \cos. n x$ find $\frac{d^r u}{dx^r}$.

ENGLISH LITERATURE—LANGUAGE.

Examiners..... } VEN. ARCHDEACON LEACH, D.C.L.
 } REV. EDWIN HATCH, B.A.

1. Give the proper definition of a *true* synonym, the popular signification, and state the reasons why some shade of difference of meaning in words regarded as synonyms, is always discernible.

2. Whence arises what is termed euphemism in language, and on what grounds is the contrary *vice* condemned ?

3. Illustrate the tendency in modern languages to reject superfluous niceties of expression.

4. Show that etymology is an uncertain guide to the actual use of words.

5. Give the substance of the remarks on "choice of language in which translations are to be made."

6. Distinguish between the terms "idiom" and "idiotism," and illustrate the distinction.

7. Explain the terms "paraphrase" and "metaphrase," and state some of the advantages arising from the practices which they refer to.

8. To what causes is the corruption of a language attributed ? and give instances of different kinds of corruption of the pronunciation of the English language.

9. State the leading divisions of the Indo-European family of languages.

10. Illustrate by examples and account for, the character of the Celtic element in modern English.

11. Discuss the question of the origin of the Danish element in the English language.

12. What are the chief losses and gains of English as compared with Anglo-Saxon ?

13. Compare the relative advantages of native and foreign scientific terms.

14. In what respects does language afford any insight into the moral character of a people ?

15. State briefly the main effects of the introduction of the art of printing on the English language.

16. Distinguish, with examples, between *rhythm*, *metre*, *assonance*, *alliteration*, *line rhyme*, *half rhyme*.

HISTORY AND ENGLISH LITERATURE.

HISTORY.—GIBBON AND HUME.

Examiners } REV. GEORGE CORNISH, M.A.
 } REV. EDWIN HATCH, B.A.

1. Give an account of the civil and military administration of the Empire under Constantine and his immediate successors.
2. Give an account of the part which was played in the disintegration of the Empire by the Teutonic, Slavonic, and Turanian races respectively.
3. Give a brief account of the reign and character of Julian.
4. What were the chief epochs in Roman jurisprudence before the time of Justinian ?
5. Describe briefly the conquests of the Saracens during the first century of the Hegira.
6. Give an account of (1) the history of Charlemagne, (2) the extent of his empire, (3) his relation to the Papacy and its influence on the subsequent history of Europe.
7. Give a brief account of the history of Rienzi.
8. Give a list of the Crusades, specifying in regard to each (1) its date, (2) its leaders, (3) its route, (4) its results.
9. What were the immediate causes and results of the *Magna Charta* ?
10. State briefly (1) the origin, (2) the leading events, (3) the results, social and political, of the Wars of the Roses.
11. Give a brief account of the history of Cardinal Wolsey.
12. Draw a genealogical table of the house of Tudor, so as to show especially the relationship of Lady Jane Grey, and Lady Arabella Stuart, to Mary and James I., respectively.
13. Give an account of the immediate causes of the Great Civil War,

We should consider this world as a great mart of commerce, where fortune exposes to our view various commodities, as riches, ease, tranquillity, fame, integrity, knowledge. Everything is marked at a settled price ; our time, our labour, our ingenuity, is so much ready money which we are to lay out to the best advantage. Examine, compare, choose, reject, but stand to your own judgment ; and do not, like children, when you have purchased one thing, repine that you do not possess another that you did not purchase. Such is the force of well-regulated industry, that a steady and vigorous exertion of our faculties, directed to one end, will generally insure success.

PATRIOTISM.

Dear is the tie that links the anxious sire
To the fond babe that prattles round his fire;
Dear is the love that prompts the grateful youth
His sire's fond cares and drooping age to soothe:
Dear is the brother, sister, husband, wife;
Dear all the charities of social life:
Nor wants firm friendship holy wreaths to bind
In mutual sympathy the faithful mind.
But not th' endearing springs that fondly move
To filial duty, or parental love;
Not all the ties that kindred bosoms bind,
Nor all in friendship's holy wreath entwined,
Are half so dear, so potent to control
The generous workings of the patriot soul,
As is that holy voice, that cancels all
These ties, that bids him for his country fall.

2. Explain on what grounds the distinction was formerly made between vegetable and mineral alkalies, and describe the preparation of potash.
3. How is soda obtained from sea-salt, and what are its chief uses in the arts?
4. What is the nature of the slaking of lime, and how much quick-lime and how much slaked lime can be got from 100 parts of carbonate of lime?
5. What properties distinguish aluminium from ordinary metals, and to what use are some compounds of its oxyd applied in the arts?
6. What are the chief ores of iron, and how is the metal obtained from them?
7. How are malleable iron and steel made, and in what do they differ from cast iron?
8. How can you detect copper in a solution, and how determine its amount?
9. What is the *lead tree*, and how is it formed?
10. How will you analyse a silver coin, and separate the silver from the copper?
11. What is the nature of the alcoholic fermentation, and how is pure alcohol obtained?
12. What do you understand by the albuminoid bodies, and what are the principal examples of them in vegetable and in animal substances?
13. What are the principal constituents of milk, of blood, and of bone?
14. What are the mineral elements which enter into the composition of plants, and which among them are most valuable to the agriculturist?

ZOOLOGY.

THIRD YEAR.

Examiner,.....J. W. DAWSON, LL.D., F.R.S.

1. State the characters of *Echinodermata*, and describe the shell and its appendages in *Echinus*.
2. State the distinctions between *Brachiopoda*, *Lamellibranchiata*, and *Tunicata*.
3. Illustrate the characters of *Gasteropoda* by any well-known species.
4. What are the distinctive characters of Protozoa, and what views may be taken as to their place in the Zoological System?
5. Describe the locomotive and prehensile organs of the *Annulata* and *Anthozoa*.
6. State the characters of the *Polyzoa*, with examples.
7. To what class and order does *Nautilus* belong? State fully the characters of the class and order.
8. Describe the metamorphosis of one of the *Acalephæ*.
9. Explain the differences between Insects, Arachnidans and Crustaceans, and the order of rank of these classes.
10. Describe the circulation and respiration of Fishes and Birds.
11. Give the orders of Reptiles or Mammals, with examples, and describe one.
12. Describe any class of the animal kingdom not mentioned above, with illustrations of its orders.
13. State the division of the *Crustacea* into sub-classes, with its grounds.
14. Characterise, and refer to its place in the system, any one of the following groups:—*Porifera*, *Pteropoda*, *Trematoda*, *Batrachia*.
15. Describe any of the specimens exhibited.

GEOLOGY AND MINERALOGY.

Examiner,.....J. W. DAWSON, LL.D., F.R.S.

1. State the chemical and crystallographic differences between Calcite, Dolomite, and Fluor-spar.
2. Describe Orthoclase, and state its mode of occurrence in rocks.
3. Mention some of the most important Silicates of Lime and Magnesia, and describe one.
4. Describe Mica, Chlorite, Anhydrite, Magnetite.
5. State the mode of formation and occurrence of Coal, Gypsum or Rock Salt.
6. Give in a tabular form the order of succession of the Mesozoic formations.
7. Describe the Boulder Clay of Canada, and explain the changes of climate which it indicates.
8. State the Geological age of the London Clay and Bagshot beds, and describe their equivalents in the Paris Basin.
9. Describe the Greensand and Muschelkalk, and state their geological relations.
10. State the geological relations of the following formations: Chazy, Wenlock, Corniferous, Coal Formation,—and describe one of them.
11. State in order the Lower Silurian Formations represented in British America, with their general geographical distribution.
12. Give a detailed palæontological account of any order of invertebrate animals abundant in the Mesozoic rocks.
13. What are the leading botanical characters of the Flora of the Devonian.
14. Give a detailed account of any genus of animals or plants of the Palæozoic period.
15. Explain the nature and origin of Earthquakes and Volcanic Eruptions.

(FIRST PAPER.)

WEDNESDAY, APRIL 4TH:—9 A.M. TO 1½ P.M.

Examiner,.....J. W. DAWSON, LL.D., F.R.S., F.G.S.

1. Explain the laws of distribution of mountain chains and coast lines.
2. How do we account for the distribution of Ocean currents in the Atlantic, and what effects may be attributed to these currents?
3. Describe minutely the mineral constitution and geological relations of Gneiss, Talcose Schist, Dolomite, and Trachyte.
4. State the nature and mode of occurrence of the principal ores of Copper or Iron.
5. How are the Clinometer and Compass used in field geology?
6. Illustrate the effects of Concretionary Action, Faults and Folding on stratified deposits.
7. Describe the Huronian Rocks of Canada with their mineral veins.
8. Describe the Potsdam, Calcareous and Chazy formations, with their European equivalents and their relations to the Quebec group.
9. Describe the Trenton group as it exists near Montreal.
10. Describe the Coal formation, and state the conditions of deposit indicated by its structure and composition.
11. Refer the following genera to their places in the Geological Series and in the Zoological classification:—*Orthis*, *Spirifer*, *Asaphus*, *Petraia*, *Ptilodictya*, *Homalonotus*, *Murchisonia*, *Paradoxides*, *Palæoniscus*.
12. Describe the Lower Laurentian formation in Canada, with its distribution and fossils.
13. What geological formation in Canada would be indicated by the presence of *Zaphrentis gigantea*, *Phacops bufo* and *Spirifer mucronatus*, and for what is that formation remarkable?

(SECOND PAPER.)

THURSDAY, APRIL 19TH:—9 A.M. TO 12½ P.M., AND 2 P.M. TO 5 P.M.

Examiner,.....J. W. DAWSON, LL.D., F.R.S.

1. Describe the formations of the Middle Mesozoic in Europe and America, with their characteristic fossils.
2. Name the characteristic reptilian genera of the Wealden, and describe one of them.
3. State the geographical distribution of the Trias in America, and its subdivisions in Europe.
4. Explain the structure and geological age of the White Chalk and the Calcaire Grossier.
5. Describe the formations of the geological period immediately preceding the age of man, as they occur in America.
6. Give a complete geological account of one of the following formations: the Saliferous Marls, the Lias or the Connecticut sandstones.
7. State fully the nature, origin and geological effects of Glaciers and Icebergs.
8. Characterise the genera, *Belemnites*, *Plesiosaurus*, *Gryphæa*, *Nummulites*, and *Palæotherium*, and state their geological positions.
9. State the zoological characters and relations of the Lamellibranchiata and Pulmonata.
10. Describe the structures of *Cyanea*, and state fully their relations to those of *Campanularia* or *Sertularia*.
11. Describe the organs of nutrition and respiration in Polyzoa, and state the grounds on which these animals are divided into orders.
12. Describe the animal of *Terebratula*, and state the differences between that genus and *Spirifer*, *Atrypa* and *Leptæna*.
13. Describe the organs in the cephalo-thorax of *Homarus* and *Limulus*.
14. Give an account of the structures of a species of the class Cephalopoda order Dibranchiata.
15. What are the zoological affinities of the genera *Comatula*, *Cyclops*, *Lymnea*, *Spirorbis*?
16. Describe fully the metamorphoses of a typical Insect.
17. Describe fully the differences between typical Arachnida and Crustacea. .

(THIRD PAPER.)

TUESDAY, APRIL 24TH:—9 A.M. TO 1 P.M.

Examiner,.....J. W. DAWSON, LL.D., F.R.S.

1. Give the characters of the tribes of North American *Ranunculaceæ*, with examples of the genera.
2. What are the principal generic forms of *Araceæ*, *Papaveraceæ*, *Rosaceæ*, and *Smilacæ* in Canada?
3. Explain fully the distinctive characters of *Gramineæ* and *Cyperaceæ*.
4. Give a detailed account of any of the orders of Monopetalous Exogens, with the Canadian genera and species.
5. Characterize the orders *Musci* and *Lycopodiaceæ*, and state the points most important in their determination.
6. Give the history, habits, and properties of any Canadian parasitic *Fungus*.
7. State the peculiarities of the floral organs in *Betulaceæ*, *Crucifera* and *Violaceæ*.
8. Characterize, and refer to their respective geological horizons, the following genera: *Calamites*, *Neuropteris*, *Pterophyllum*, *Stigmaria* *Voltzia*.
9. By what characters can you recognize plants of any one of the following genera,—*Lathyrus*, *Polypodium*, *Vaccinium*, *Typha*.
10. Give a classified list of the principal genera of Carboniferous and Jurassic plants.

Examination on specimens to be described and determined,—Friday, April 27th, 9 A.M. to 1 P.M.

BOTANY.

Examiner,.....J. W. DAWSON, LL.D., F.R.S., &c.

- 1 What are Cellular Structures as distinguished from Vascular? Give examples.
2. Describe Prosenchymatous Tissue, with examples.
3. What are Spiral Vessels? State the parts in which they occur and their use.
4. Describe the structures in the blade of the leaf.
5. Explain the relations of Carbonic Acid and Ammonia to the nutrition of the plant.
6. Describe the leading kinds of inflorescence.
7. Describe minutely the Stamen, with the terms applied to its parts and to its positions relatively to the other parts of the flower.
8. Describe the Ovule, and the relations of its parts to those of the seed.
9. Explain Fertilization in Phænogams.
10. Describe the reproductive organs of Mosses and Ferns.
11. Explain the terms Gamopetalous, Epigynous, Monadelphous, and the modifications of parts by which these arrangements are produced.
12. What are the histological characters, and mode of production of Cork, Cotton, Starch, Vegetable Ivory?
13. Explain the natural system of Botany, and state the gradation of groups, with examples.
14. State the distinction between Exogens and Endogens.
15. State the distinction between Angiosperms and Gymnosperms.
16. Describe the Drupe, Achene, Samara, Legume, Silique.
17. Describe, and refer to their series and class, the specimens exhibited.

ZOOLOGY.

Examiner,.....J. W. DAWSON, LL.D., F.R.S., &c.

1. Explain the primary subdivision of the animal kingdom into provinces, giving the characters of one of them in full.
2. Define the species in Zoology, and explain the nature of genera, families, orders, and classes, with examples.
3. How are respiration and circulation performed in *Insecta* and *Pulmonata*?
4. Name the orders of the *Protozoa*, and characterize one of them with examples.
5. Describe the highest class of the *Mollusca*, and give an example of each of its orders.
6. Name the classes of the *Articulata*, and characterize two of them, with examples.
7. State the characters of the class *Pisces*, and describe one of the orders, with Canadian examples.
8. State the characters of the class *Hydrozoa*, with examples.
9. Describe the oral appendages of *Clio*, *Actinia*, or *Homarus*.
10. What animals are indicated by the terms *Marsupialia*, *Myriapoda*, *Rodentia*, *Nudibranchiata*, *Echinoidea*; state their characters, and give examples.

M.D.,C.M., PRIMARY EXAMINATION, SESSION 1865-66.

SATURDAY, APRIL 21ST.

ANATOMY.—2 TO 3 P.M.

Examiner,.....W. E. SCOTT, M.D.

1. With what Bones does the Sphenoid articulate? also, name the foramina and muscles attached to the Sphenoid Bone.
2. Give the relations and name the branches of the Radial Artery.
3. Mention the branches and distribution of the Inferior Maxillary Nerve.

CHEMISTRY.—3 TO 4 P.M.

Examiner,.....W. SUTHERLAND, M.D.

1. Describe the process for the extraction of Phosphorus: what are its properties, and in what condition or state of combination is it found in nature?
2. Describe the German and English plans for the preparation of Sulphuric Acid: what are its properties and its tests?
3. What are the varieties of Grape Sugar, how is it extracted from, and tested in, urine;—what effect is produced on its composition by the action of a ferment, and what are the proximate and final results of oxidation on the liquid obtained during that fermentation?

NOTE.—Subsequent Oral Examination on the above subjects.

M.D., C.M., PRIMARY EXAMINATION, SESSION 1865-66.

SATURDAY, APRIL 21ST.

MATERIA MEDICA.—4 TO 5 P.M.

Examiner,.....W. WRIGHT, M.D.

1. By what characters are the following kinds of Aloes known, viz: "the Mocha," "the Vesiculated," "the Curacao," and "the Liquid,"—and to what general classes do they belong?

2. The vapor of Chloroform:—its density at 60° Fah,—in what ratio is it present in 100 parts of a mixture of itself and of air at the temperatures of 40° and 85° ,—above what percentage in such a mixture does it cause "the throat spasm,"—in what degree of dilution can it be safely breathed,—and to what is it reduced by heat or by decomposition?

3. State the Medical and Surgical uses of the Perchlorid of Iron, and explain how it should be given or applied so that they may be obtained.

INSTITUTES OF MEDICINE.—5 TO 6 P.M.

Examiner,.....W. FRASER, M.D.

1. Enumerate the elements,—organic and inorganic,—entering into the composition of the Blood, and state briefly the purposes or uses of each.

2. What are the sources of Animal Heat, and what influence has the nervous system on its production?

3. Name the chief varieties of Cancer. Explain its minute structure, mode of growth, mean duration, and laws of dissemination.

NOTE.—Subsequent Oral Examination on the above subjects.

M.D., C.M., FINAL EXAMINATION, SESSION 1865-66.

TUESDAY, APRIL 24TH.

THEORY AND PRACTICE OF MEDICINE.—2 TO 3 P.M.

Examiner,.....R. P. HOWARD, M.D., L.R.C.S.E., &c.

1. Give the causes of Croup and of Laryngismus Stridulus, the means of distinguishing them from each other, and the treatment suitable to them.

2. Mention the several affections which induce Ascites as a local dropsy ; the diagnostic characters of Cirrhosis and Albuminoid degeneration of the Liver ; explain how these two affections cause the Ascites, and describe the treatment they require.

3. Describe the morbid anatomy of Acute Dysentery ; its causes, and the treatment of the simple sthenic form.

CLINICAL MEDICINE, AND MEDICAL JURISPRUDENCE.—3 TO 4 P.M.

Examiner,.....D. C. MACCALLUM, M.D., M.R.C.S., LOND.

1. Give the principal complications that may arise during the course of an attack of Acute Rheumatism, their diagnostic characters, and the modifying influence which each may have on the treatment of that disease.

1. Describe the several dangers attending a blow on the head.

What are the principal methods to be adopted for the determination of live-birth in a case of infanticide ?

2. Give the symptoms of poisoning by Oxalic Acid, and the tests for Arsenic in substance.

NOTE.—Subsequent Oral Examination on the above subjects.

TUESDAY, APRIL 24TH.

SURGERY AND CLINICAL SURGERY.—4 TO 5 P.M.

Examiners,..... { GEO. W. CAMPBELL, A.M., M.D., ETC.
 { R. CRAIK, M.D.

1. What are the symptoms and treatment of strangulated Inguinal Hernia? If the taxis fails, how is the operation performed; what are the coverings of the oblique and direct varieties; what is the position of the Epigastric Artery, with reference to the neck of the sac in each, and how is it to be avoided in dividing the stricture?

2. Describe the dislocations of the shoulder joint, the symptoms and treatment of each variety.

3. State the points of difference between *intra* and *extra*-capsular fractures of the femur; their modes of treatment respectively, and the probable results.

MIDWIFERY.—5 TO 6 P.M.

Examiner,.....A. HALL, M.D.

1. By what symptoms would you recognize a case of Placenta Prævia before the termination of gestation? What varieties of the affection are there? and detail the respective modes of treatment.

2. In a case of labour in the first position, what are the obstacles encountered by the child's head in its passage through the pelvis, and detail the different mechanical contrivances by which these obstacles are surmounted.

3. How would you distinguish between a case of Menorrhagia and one of Abortion, at the second month of gestation? and if it were the latter, in what manner would you treat it?

NOTE.—Subsequent Oral Examination on the above subjects.

McGILL UNIVERSITY, MONTREAL.

M.D., C.M., HOLMES MEDAL EXAMINATION, SESSION 1865-66.

FRIDAY, APRIL 27TH.

NOTE.—This Medal, founded by the Medical Faculty, is open for competition to those members of the graduating class who have undergone successfully their final examinations, and whose inaugural theses are deemed respectively worthy of 100 marks or more, the maximum number of marks for any thesis being 200. Complete answers to all the questions are equal to 400 marks (50 for each branch) making the total number obtainable 600.

ANATOMY.—2 TO 3 P.M.

Examiner,.....W. E. SCOTT, M.D.

1. Describe the Perineal Fascia, having reference to the anterior or urethral portion of the perineum; mention the parts contained between the superficial fascia of the perineum and the deep or triangular ligament; give the origin, course and distribution of the internal pudic artery.

2. Name the muscles of the anterior tibial region, and give the relations of the anterior tibial artery.

3. Give the origin, extent, division, relations and branches of the subclavian arteries.

CHEMISTRY.—3 TO 4 P.M.

Examiner,.....W. SUTHERLAND, M.D.

1. What is the formula of urea? give the calculation whereby the percentage of its nitrogen is established, and what volume of this gas is equal to a grain of urea.

2. What is the colour and the composition of the precipitate produced by sulphydric acid with each of the following substances:—arsenious acid, oxides of antimony and cadmium, peroxides of tin and iron?

3. Describe the manner of preparing the pure and dilute cyanhydric acid; what are its properties, what the mode of estimating its strength in any specimen, and its tests in a case of fatal poisoning by it?

McGILL UNIVERSITY, MONTREAL.

Faculty of Medicine.

M.D., C.M., HOLMES MEDAL EXAMINATION, SESSION 1865-66.

FRIDAY, APRIL 27TH.

MATERIA MEDICA.—4 TO 5 P.M.

Examiner,..... W. WRIGHT, M.D.

1. Specify the adulterations of Iodide of Potassium, and state how they are known.

2. Mention the actions of digitalis in medicinal doses; also the morbid states of the body, and of special organs, as the heart, brain, &c., in which it would be indicated, as well as those in which it should not be administered.

3. Give the officinal preparations according to the British Pharmacopœia; firstly, of Barbadoes aloes; secondly, of Socotrine aloes, and name their constituents.

INSTITUTES OF MEDICINE.—5 TO 6 P.M.

Examiner,..... W. FRASER, M.D.

1. What are the functions of the spinal cord as an independent nervous centre?

2. State the different channels through which nutritious and other matters can be absorbed into the blood, and the elaboration which some of them undergo in their transit.

3. Give the composition of bile, the physiological origin of its elements, and the purposes served by it in intestinal digestion.

MCGILL UNIVERSITY, MONTREAL.

M.D., C.M., HOLMES MEDAL EXAMINATION, SESSION 1865-66

SATURDAY, APRIL 28TH.

THEORY AND PRACTICE OF MEDICINE.—2 TO 3 P.M.

Examiner,.....R. P. HOWARD, M.D., L.R.C.S.E., &c.

1. Explain the modes in which the several causes of Bright's disease act, and give illustrations of each ; describe the morbid appearances in the several stages of the "large white kidney," and the characters of the urine in that variety and in the "contracted kidney."

2. What are the conditions favourable to the development of zymotic diseases ? Give in detail those specially operative in the development of cholera.

3. Describe the more important differences observed in the course and termination of chronic Phthisis ; state the principles which should guide the physician in selecting a climate for the subjects of the disease, and explain the circumstances in which he should not recommend travelling.

CLINICAL MEDICINE AND MEDICAL JURISPRUDENCE—3 TO 4 P.M.

Examiner,.....D. C. MACCALLUM, M.D., M.R.C.S., LOND.

1. Mention the different pathological changes in the kidney which give rise to albuminuria, and state also the physical and microscopical characters of the urine, and the general symptoms attending each.

2. What are the diseases that may be mistaken for neurotic poisoning ? Describe the principal features of each, and state in what particulars each disease differs from poisoning.

3. Give the characteristics of blood stains, the methods of detecting them by the iron, nitrogen, and albumen, which they contain, and describe the characters of the stains with which blood stains may be confounded.

Faculty of Medicine.

M.D., C.M., HOLMES MEDAL EXAMINATION, SESSION 1865-66.

SATURDAY, APRIL 28TH.

SURGERY AND CLINICAL SURGERY.—4 TO 5 P.M.

Examiners, } GEO. W. CAMPBELL, A.M., M.D., &c.
 } R. CRAIK, M.D.

1 Give the symptoms and causes of compression of the brain produced by injury. Under what circumstances should the trephine be employed, and when should we abstain from operating; and are there any cases where operative interference is proper without serious symptoms?

2. Give the symptoms and treatment of the different forms of Iritis.

3. Give the diagnostic characters of infecting and noninfecting chancres, with the treatment applicable to each class.

MIDWIFERY.—5 TO 6 P.M.

Examiner, A. HALL, M.D.

1. How would you distinguish between the corpus luteum of pregnancy at full term, and one of an ordinary catamenial period?

2. How would you distinguish between accidental and unavoidable hemorrhage?

3. Under what circumstances are the operations of version and embryotomy required, and what is the smallest antero-posterior diameter through which a living child has been extracted.

OBLIGATIONS.

Examiner, PROF. ABBOTT, B.C.L.

1. Explain the sense in which the term obligation is used in this course, and state the principal divisions of such obligations.
2. Describe fully the causes from which obligations arise.
3. State the effect upon a contract, of error, and of fraud, respectively ; and define clearly the distinction which exists between the operation of those two defects in contracts.
4. What difference is there in the extent of inequality which will render a contract defective, considered with regard to the parties to such contract ?
5. State the distinction between the respective capacity for contracting, of minors below and above the age of puberty, of lunatics, and of married women.
6. Describe fully the distinctions which exist between persons obliged *in solido*, and several debtors of an indivisible obligation ; and the effects which result from those distinctions as regards the debtors and their heirs, in case of the non-performance of such obligation.
7. What is the effect upon the heirs of the debtor of an indivisible obligation, of the breach of such obligation by one of them ? and state the distinction, if any, between the breach of such an obligation *in faciendo*, and that of such an obligation *in non faciendo*.
8. If a penal clause is attached to an obligation, is the penalty incurred for the whole, and by all the heirs of the debtor, by the contravention of one of them ? and if the question be susceptible of different answers, as the obligation is divisible or indivisible ; give both of such answers.
9. What is the nature of the several exceptions of Division and Discussion on the part of sureties, and what is their effect ? State any restrictions upon pleading them, arising from the nature of the contract, the time of opposing them, or the subject affected by them.
10. What are the rights which a surety may have against the principal debtor ; and how may he entitle himself to those rights ? When has the surety an action against the principal, before he has paid the debt ?

11. What is the leading rule for the imputation of payments, when none has been made either by the debtor or creditor? What is the distinction taken by Mr. Pothier, as to imputation, between interest stipulated for, and interest which is the result only of a judgment?

12. What is the difference between compensation and payment? What debts may be opposed in compensation, and when does it take place? State in what cases the fact of the demand and the debt set up in compensation, having arisen *ex eodem fonte*, is of importance in considering whether compensation has taken place.

SECOND AND THIRD YEARS.

PROMISSORY NOTES AND BILLS OF EXCHANGE.
